Extracting content from text continues to be an important research problem for information processing and management. Approaches to capture the semantics of text based document collections may be based on Bayesian models, probability theory, vector space models, statistical models, or even graph theory. As the volume of digitized textual media continues to grow, so does the need for designing robust, scalable indexing and search strategies, software to meet a variety of user needs. Knowledge extraction or creation from text requires systematic yet reliable processing that can be codified and adapted for changing needs and environments. This book will draw upon experts in both academia and industry to recommend practical approaches to the purification, indexing, and mining of textual information. It will address document identification, clustering, and categorizing documents, cleaning text, and visualizing semantic models of text.

Document Warehousing and Text Mining Dan Sullivan, 2001-03-07. Although data warehousing is essential, the real payoff is in mining this text to provide timely and accurate information to decision makers. The goals of text mining are similar to those of data mining, but the techniques differ. This book explains these text mining techniques.
