ADVANCED DATA STRUCTURES AND ALGORITHMS Prof. Sanjay Agal,2023-10-30 One way to think of an algorithm is as a finite set of instructions that when followed out in the proper sequence result in a certain operation being carried out The following is a list of the criteria that need to be satisfied by any algorithm to introduce An algorithm may contain zero or more inputs which are taken or collected from a certain collection of items that have been defined in advance The result of An algorithm may have the capability of producing one or more outputs each of which is uniquely connected to one or more of the algorithm s inputs Clarity of the definition is required Each step must have a goal that is expressed very clearly and each instruction must be extremely clear in order for the step to be successful Having a cap on anything Following a fixed and finite number of steps the algorithm needs to successfully finish also known as terminate The potential for achieving one s goals It is essential that every one of the responsibilities that need to be fulfilled be so vital that they can be carried out accurately and within a certain length of time It is possible to express an algorithm in a variety of different ways
