*Computational Thermo-Fluid Dynamics* Petr A. Nikrityuk, 2011-09-19 Combining previously unconnected computational methods this monograph discusses the latest basic schemes and algorithms for the solution of fluid heat and mass transfer problems coupled with electrodynamics It presents the necessary mathematical background of computational thermo fluid dynamics the numerical implementation and the application to real world problems Particular emphasis is placed throughout on the use of electromagnetic fields to control the heat mass and fluid flows in melts and on phase change phenomena during the solidification of pure materials and binary alloys However the book provides much more than formalisms and algorithms it also stresses the importance of good feasible and workable models to understand complex systems and develops these in detail Bringing computational fluid dynamics thermodynamics and electrodynamics together this is a useful source for materials scientists PhD students solid state physicists process engineers and mechanical engineers as well as lecturers in mechanical engineering

**Introduction to Thermal and Fluid Engineering** Allan D. Kraus, James R. Welty, Abdul Aziz, 2011-09-06 Introduction to Thermal and Fluid Engineering combines coverage of basic thermodynamics fluid mechanics and heat transfer for a one or two term course for a variety of engineering majors The book covers fundamental concepts definitions and models in the context of engineering examples and case studies It carefully explains the methods used t **Building Services**

**Thermal Sciences** Merle C. Potter, Elaine P. Scott, 2024-10-03 Thermal Sciences may be used in some curricula with two required courses and in others with only one thermal science course This text is written so it can be used in either the two semester sequence of Thermodynamics and Fluid Mechanics or in the course that also introduces Heat Transfer Thermodynamics and Fluid Mechanics texts have increased in length over the years so that now they each may contain 1000 pages Much of that material is never used in the classroom and much of it tends to confuse the students with material that is not significant to the subject at hand We have attempted to eliminate much of that material especially the material that is most often reserved for an advanced course The Thermodynamics Part includes more material than can be covered in a one semester course this allows for selected material on power and refrigeration cycles psychrometrics and combustion The Fluid Mechanics Part also contains more material than can be covered in a one semester course allowing potential flows boundary layers or compressible flow to be included The heat transfer material that is included in various chapters can be inserted if desired as it is encountered in the text A one semester service course for non mechanical engineers may be organized with selected sections from both the Thermodynamics Part and the Fluid Mechanics Part Thermodynamics is presented in chapters 1 through 9 fluid mechanics in Chapters 10 through 17 and the introductory material of heat transfer is included in Sections 3 6 4 11 and 16 6 6 All the material is presented so that students can follow the derivations with relative ease reference is made to figures and previous equations using an easy to follow style of presentation Numerous examples then illustrate all the basic principles of the text Problems at the end of each chapter then allow for application of those principles to numerous situations encountered in real life The problems at the end of each chapter begin with a set of multiple choice type questions that are typical of the questions encountered on the Fundamentals of Engineering Exam the exam usually taken at the end of

the senior year to begin the process of licensure and the Graduate Record Exam Engineering Those questions are followed with problems often grouped according to topics and ordered by level of difficulty which illustrate the principles presented in the text material Answers to selected problems are included at the end of the text
