Chen, Jenny K. Chen, 2021-04-08 This book provides a concise point of reference for the most commonly used regression  
methods It begins with linear and nonlinear regression for normally distributed data logistic regression for binomially  
distributed data and Poisson regression and negative binomial regression for count data It then progresses to these  
regression models that work with longitudinal and multi level data structures The volume is designed to guide the transition  
from classical to more advanced regression modeling as well as to contribute to the rapid development of statistics and data  
science With data and computing programs available to facilitate readers learning experience Statistical Regression  
Modeling promotes the applications of R in linear nonlinear longitudinal and multi level regression All included datasets as  
well as the associated R program in packages nlme and lme4 for multi level regression are detailed in Appendix A This book

Edition provides the reader with a helpful guide to conducting multilevel data modeling using the R software environment  
After reviewing standard linear models the authors present the basics of multilevel models and explain how to fit these

chapter has been included focussing on fitting multilevel latent variable modeling in the R environment With R it is possible  
to fit a variety of latent variable models in the multilevel context including factor analysis structural models item response  
theory and latent class models The third edition also includes new sections in Chapter 11 describing two useful alternatives  
to standard multilevel models fixed effects models and generalized estimating equations These approaches are particularly  
useful with small samples and when the researcher is interested in modeling the correlation structure within higher level
