Mexican Cartel Essays and Notes: Strategic, Operational, and Tactical Robert J. Bunker, 2013-05-30 This second Small Wars JournalEl Centro anthology signifies the important debate that this new forum focusing on the crime wars and criminal insurgencies taking place in Mexico and other regions of the Americas is helping to generate in U S defense and homeland security circles The debate comes at a time when neither of the two major U S presidential candidates were willingly to candidly discuss this issue and at the end of the recent Felipe Caldern administration which saw over 80 000 dead 20 000 missing and 200 000 internal refugees stemming from gang and cartel violence during its tenure in Mexico Dave Dilegge SWJ Editor in Chief

A Century of Electrical Engineering and Computer Science at MIT, 1882-1982 Karl L. Wildes, Nilo A. Lindgren, 1985 The book s text and many photographs introduce readers to the renowned teachers and researchers who are still well known in engineering circles Electrical engineering is a protean profession Today the field embraces many disciplines that seem far removed from its roots in the telegraph telephone electric lamps motors and generators To a remarkable extent this chronicle of change and growth at a single institution is a capsule history of the discipline and profession of electrical engineering as it developed worldwide Even when MIT was not leading the way the department was usually quick to adapt to changing needs goals curricula and research programs What has remained constant throughout is the dynamic interaction of teaching and research flexibility of administration the interconnections with industrial progress and national priorities The book s text and many photographs introduce readers to the renowned teachers and researchers who are still well known in engineering circles among them Vannevar Bush Harold Hazen Edward Bowles Gordon Brown Harold Edgerton Ernst Guillemin Arthur von Hippel and Jay Forrester The book covers the department s major areas of activity electrical power systems servomechanisms circuit theory communications theory radar and microwaves developed first at the famed Radiation Laboratory during World War II insulation and dielectrics electronics acoustics and computation This rich history of accomplishments shows moreover that years before Computer Science was

added to the department's name such pioneering results in computation and control as Vannevar Bush's Differential Analyzer early cybernetic devices and numerically controlled servomechanisms the Whirlwind computer and the evolution of time sharing computation had already been achieved
