**Physics for the Inquiring Mind** Eric M. Rogers, 2011-04-17 In our scientific age an understanding of physics is part of a liberal education Lawyers bankers governors business heads administrators all wise educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization both materially and intellectually They need knowledge and understanding instead of the feelings all too common that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests Such a sense of understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away it leaves little but a confused sense of mystery Nor is the need met by survey courses that offer a smorgasbord of tidbit they give science a bad name as a compendium of information or formulas The non scientist needs a course of study that enables him to learn real science and make its own with delight For lasting benefits the intelligent non scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it He needs a carefully selected framework of topics not so many that learning becomes superficial and hurried not so few that he misses the connected nature of scientific work and thinking He must see how scientific

knowledge is built up by building some scientific knowledge of his own by reading and discussing and if possible by doing experiments himself He must think his own way through some scientific arguments He must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory He must see several varieties of scientific method at work And above all he must think about science for himself and enjoy that These are the things that this book encourages readers to gain by their own study and thinking Physics for the Inquiring Mind is a book for the inquiring mind of students in college and for other readers who want to grow in scientific wisdom who want to know what physics really is

**Neutrinos in Astro, Particle and Nuclear Physics** Amand Faessler, 1998 Hardbound In cosmology the neutrinos determine the expansion rate of the early universe They probably constitute part of hot dark matter and are essential for supernova explosions In spite of great efforts the missing solar neutrinos are not completely understood Various solar neutrino experiments seem to give different results about the missing solar neutrinos However each of these experiments such as the C1 detector GALLEX SAGE and KAMIOKANDE measure slightly different quantities Only GALLEX and SAGE look exactly for the same neutrinos and seem to be in agreement with each other This volume of review articles looks in depth at the latest research results and presents a state of art view of this fast expanding field All the chapters are written by leading experts active in the field today
