

Chapter 7 Membrane Structure and Function

Overview: Life at the Edge

- The plasma membrane is the boundary that separates the living cell from its surroundings.
- The plasma membrane exhibits **selective permeability**, allowing some substances to cross it more easily than others

Concept 7.1: Cellular membranes are fluid mosaics of lipids and proteins.

- Phospholipids are the most abundant lipid in the plasma membrane
- Phospholipids are **amphipathic molecules**, containing hydrophobic and hydrophilic regions
- The **fluid mosaic model** states that a membrane is a fluid structure with a "mosaic" of various proteins embedded in it

If a molecule is hydrophobic, then it must also love lipids, since oil and water don't mix. Therefore, we can refer to a hydrophobic molecule as **lipophilic**.

Likewise, if a molecule is hydrophilic and loves water, then it must conversely hate lipids, and we can refer to it as **lipophobic**.

Phospholipids arrange themselves in such a way so as to protect the water-hating (hydrophobic) portion from the aqueous environment of the cell interior and exterior.

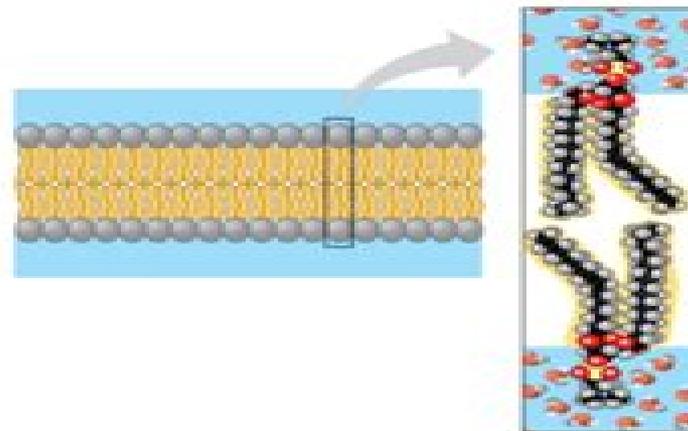

Figure 7.2 Phospholipid bilayer (cross section).

Remember, we know that based on the structure of a phospholipid, the head of the lipid molecule is polar. This is due to the presence of a positively-charged choline group and a negatively-charged phosphate group, both in the head of the molecule. This is what makes the head love water, another polar molecule.

The tail, meanwhile, is non-polar and this is why it hates water.

- Freeze-fracture studies of the plasma membrane supported the fluid mosaic model

Chapter 7 Membrane Structure And Function:

Concepts of Membrane Structure Ronald Aloia, 2012-12-02 Membrane Fluidity in Biology Volume 1 Concepts of Membrane Structure covers membrane properties influenced by alterations in membrane lipid compositions and other organizational parameters that are encompassed by the term fluidity This book is composed of eight chapters that discuss significance of fluidity changes in both normal and pathological cellular functions This book starts by describing membrane structural organization and composition and arrangement of the molecular components of cell membranes This is followed by discussions on structural properties of lipids and role of nonbilayer lipid structures in membrane fusion The methodological approaches in study of cellular membrane structural diversity and fluid mosaic model for accurate representation of membrane fluidity are also discussed This volume then describes the phenomenon of reversed or negative membrane images as viewed with transmission electron microscope Chapters 6 and 7 explain the interaction of cytochrome P 450 with phospholipids and proteins in the endoplasmic reticulum and steps in the derivation of membrane structure and packing principles Finally the concluding chapter focuses on the membrane of the human red blood cell and presents relatively simple arguments concerning its physical properties The book will serve as a primary source for research scientists and teachers interested in cellular membrane fluidity phenomena *Structure and Properties of Cell Membrane Structure and Properties of Cell Membranes* Gheorghe Benga, 2018-01-18 This book provides in depth presentations in membrane biology by specialists of international repute The volumes examine world literature on recent advances in understanding the molecular structure and properties of membranes the role they play in cellular physiology and cell cell interactions and the alterations leading to abnormal cells Illustrations tables and useful appendices complement the text Those professionals actively working in the field of cell membrane investigations as well as biologists biochemists biophysicists physicians and academicians will find this work beneficial **Current Topics in Membranes and Transport**, 1987-07-09 Current Topics in Membranes and Transport *The World of the Cell* Wayne M.
