Common Rail System for GDI Engines Giovanni Fiengo, Alessandro di Gaeta, Angelo Palladino, Veniero Giglio, 2012-11-02

Progressive reductions in vehicle emission requirements have forced the automotive industry to invest in research and development of alternative control strategies. Continual control action exerted by a dedicated electronic control unit ensures that best performance in terms of pollutant emissions and power density is married with driveability and diagnostics. Gasoline direct injection GDI engine technology is a way to attain these goals. This brief describes the functioning of a GDI engine equipped with a common rail CR system and the devices necessary to run test bench experiments in detail. The text should prove instructive to researchers in engine control and students are recommended to this brief as their first approach to this technology. Later chapters of the brief relate an innovative strategy designed to assist with the engine management system injection pressure regulation for fuel pressure stabilization in the CR fuel line is proposed and validated by experiment. The resulting control scheme is composed of a feedback integral action and a static model based feed forward action the gains of which are scheduled as a function of fundamental plant parameters. The tuning of closed loop performance is supported by an analysis of the phase margin and the sensitivity function. Experimental results confirm the effectiveness of the control algorithm in regulating the mean value rail pressure independently from engine working conditions engine speed and time of injection with limited design effort.

Diesel Engines - Current Challenges and Future Perspectives Hasan

Koten, 2024-05-22 This book discusses the current technology and future status of diesel engines. While gasoline engines are preferred for speed and jet engines diesel engines are widely used in vehicles and machinery that require torque such as ships, trains, tanks, unmanned aerial vehicles, UAVs, and heavy duty vehicles. Some recent research on global climate change has focused on obtaining zero carbon zero emissions and decarbonization via clean combustion technologies. For this reason restrictive emission regulations have forced engine manufacturers and research centers to turn to different technologies to achieve clean combustion in diesel engines. This book focuses on different combustion technologies from artificial intelligence applications in diesel engines to alternative fuels. It discusses the roles of artificial intelligence in the design of diesel engines, the use of different fuels in diesel engines and the effects of these on the performance and emission values of diesel engines. Solving the challenge of hydrogen storage in hydrogen fed diesel engines will open a new era for internal combustion engines. In particular the use of hydrogen fuel produced by the reaction of chemical ingredients with water in diesel engine cycles will have a significant impact on the industry. This book which brings together the latest studies on clean combustion technologies is an interesting resource for both industry and research centers.

New Generation of Engine... Pierre Duret,

There is growing interest in the new generation of engine combustion processes that are emerging from research and development projects worldwide. The new combustion processes generally bring about significant improvements in fuel economy combined with ultra low emissions of pollutants. The French Petroleum Institute an internationally recognized

expert in new engine combustion processes organized an international congress whose proceedings are presented in this book The meeting provided an opportunity for experts from the automotive industry the heavy duty and small engine sectors OEM suppliers fuel companies and R D organizations to exchange views on the chances of success of newly developed engine combustion processes

United States. Congress, **Great Small FIATs** Phil Ward, 2014-05-21 In deciding which models to choose for inclusion in this book selected from Fiat s huge inventory the author concentrated on three criteria greatness size and emotion Where size is an easy parameter to qualify greatness is more complicated because it is a combination of of both the manufacturer s and the public s opinion A car that is highly regarded by the public may not have been a commercial success and vice verse A truly great car is one that works well for both parties Emotion may be considered to be an element of greatness in that the public s love for a car is a fantastic benefit for a manufacturer and must be treasured Fiat have made the mistake of improving an icon on several occasions only to find that public opinion went against them Fortunately Fiat has been magnanimous enough to respond by giving the car buying public more of what it wants As long as they continue to do so then Fiat s reputation as the world s greatest small car manufacturer is set to continue The author chose the Topolino as the starting point as the car fulfils all the criteria and it was the first Fiat built in the late 1930s to satisfy the Italian public s new found desire for mobilisation The old conventions of car production were turned upside down with the arrival of the 600 which revolutionised car production techniques and maximised on passenger space and performance at minimal cost These principals continued via a succession of models which include the 500 850 126 127 through to more recent models like the Cinquecento and Seicento Running in parallel with these cheeky Fiats this book covers a range of slightly larger cars that were built in huge numbers Though rather staid in appearance the 1950s Millecento was family transport for millions of Italians covering three decades four when the Indian built cars are included Similarly the 128 Panda and Uno were the Italian small cars of the 70s 80s and 90s Nuova Panda carries the banner to the present day
