Korn,2013-11-11 Examination of the tables of contents of journals biochemical molecular biological ultrastructural and physiological provides convincing evidence that membrane biology will be in the 1970s what biochemical genetics was in the 1960s And for good reason If genetics is the mechanism for maintaining and transmitting the essentials of life membranes are in many ways the essence of life The minimal requirement for independent existence is the individualism provided by the separation of life from the environment The cell exists by virtue of its surface membran One might define the first living organism as that stage of evolution where macromolecular catalysts or self reproducing polymers were first segregated from the surrounding milieu by a membrane Whether that early membrane resembled present cell membranes is irrelevant What matters is that a membrane would have provided a mechanism for maintaining a local concentration of molecules facilitating chemical evolution and allowing it to evolve into biochemical evolution That or yet more primitive membranes such as a hydrocarbon monolayer at an air water interface could also have provided a surface that would facilitate the aggregation and specific orientation of molecules and catalyze their interactions If primitive membranes were much more than mere passive barriers to free diffusion how much more is this true of the membranes of contemporary forms of life A major revolution in biological thought has been the recognition that the cell and especially the eukaryotic cell is a bewildering maze of membranes and membranous organelles **Bioenergetics** Marcel Florin,Elmer H. Stotz,2014-06-28 Comprehensive Biochemistry Volume 22 Bioenergetics focuses on comprehensive biochemistry that provides a chemical approach to the understanding of the phenomena of life This book is devoted to certain aspects of organic and physical chemistry aspects considered pertinent to the interpretation of biochemical techniques and chemistry of biological compounds and mechanisms The topics discussed include the methods and scope of quantum biochemistry long range dipole dipole transfer and characteristics of the charge transfer absorption band The dye sensitized photoconductivity facilitation of solute diffusion by catalytic carriers and coupling of primary and secondary translocation are also covered in this publication This volume is valuable to biochemists and researchers concerned with biogenetics
