Computational Learning Theory Martin Anthony, N. Biggs, 1997-02-27 Computational learning theory is a subject which has been advancing rapidly in the last few years. The authors concentrate on the probably approximately correct model of learning and gradually develop the ideas of efficiency considerations. Finally applications of the theory to artificial neural networks are considered. Many exercises are included throughout and the list of references is extensive. This volume is relatively self-contained as the necessary background material from logic, probability and complexity theory is included. It will therefore form an introduction to the theory of computational learning suitable for a broad spectrum of graduate students from theoretical computer science and mathematics.

Computational Learning Theory Martin Anthony, 1997 Concepts, hypotheses, learning algorithms, Boolean formulae and representations, Probabilistic learning, Consistent algorithms and learnability, Efficient learning, The VC dimension, Learning and the VC dimension, VC dimension and efficient learning, Linear threshold networks.

Computational Learning Theory John Shawe-Taylor, Martin Anthony, 1994 The study of machine learning within the mathematical framework of complexity theory has seen great strides in just a few short years, spurred on by the tremendous rise in interest from engineers studying control to analysts predicting financial market activity. Based on the first European Conference on Computational Learning Theory and including a number of invited contributions, *Computational Learning Theory* offers an outstanding overview of the subject with topics ranging from results inspired by neural network research to those originating from more classical artificial intelligence approaches. It will appeal to students and researchers in applied mathematics, computer science and cognitive science.

Algorithmic Learning Theory Michael M. Richter, Carl H. Smith, Rolf Wiehagen, Thomas Zeugmann, 2003-06-29 This volume contains all the papers presented at the Ninth International Conference on Algorithmic Learning Theory (ALT 98) held at the European Education Centre Europäisches Bildungszentrum ebz Otzenhausen, Germany, October 8-10, 1998. The conference was sponsored by the Japanese Society for Artificial Intelligence (JSAI) and the University of Kaiserslautern. Thirty-four papers on all aspects of algorithmic learning theory and related areas were submitted; all electronically. Twenty-six papers were accepted by the program committee based on originality, quality and relevance to the theory of machine learning. Additionally, three invited talks presented by Akira Maruoka of Tohoku University, Arun Sharma of the University of New South Wales, and Stefan Wrobel from GMD respectively were featured at the conference. We would like to express our sincere gratitude to our invited speakers for sharing with us their insights on new and exciting developments in their areas of research. This conference is the ninth in a series of annual
