Subramanya, This book is a self assessment book quiz book It has a vast collection of over 2 500 questions along with answers The questions have a wide range of difficulty levels They have been designed to test a good understanding of the fundamental aspects of the major core areas of Computer Science The topical coverage includes data representation digital design computer organization software operating systems data structures algorithms programming languages and compilers automata languages and computation database systems computer networks and computer security *Compiler Design* Reinhard Wilhelm,Helmut Seidl,2010-11-10 While compilers for high level programming languages are large complex software systems they have particular characteristics that differentiate them from other software systems Their functionality is almost completely well defined ideally there exist complete precise descriptions of the source and target languages while additional descriptions of the interfaces to the operating system programming system and programming environment and to other compilers and libraries are often available The implementation of application systems directly in machine language is both difficult and error prone leading to programs that become obsolete as quickly as the computers for which they were developed With the development of higher level machine independent programming languages came the need to offer compilers that were able to translate programs into machine language Given this basic challenge the different subtasks of compilation have been the subject of intensive research since the 1950s This book is not intended to be a cookbook for compilers instead the authors presentation reflects the special characteristics of compiler design especially the existence of precise specifications of the subtasks They invest effort to understand these precisely and to provide adequate concepts for their systematic treatment This is the first book in a multivolume set and here the authors describe what a compiler does i e what correspondence it establishes between a source and a target program To achieve this the authors specify a suitable virtual machine abstract machine and exactly describe the compilation of programs of each source language into the language of the associated
