The Low-Carbon Buildings Method 2011 , Methods of Measuring Moisture in Building Materials and Structures
Lars-Olof Nilsson,2018-04-13 RILEM TC 248 MMB was established in 2012 with the main aim to improve and distribute knowledge related to moisture measurement in construction materials in various scientific and industrial applications Properties and performance of building materials and structures are influenced to a large extent by the moisture conditions in the materials Obvious examples are heat conductivity shrinkage and creep transport properties most types of deterioration discoloration etc For research and applications the moisture conditions must be quantified by measurements in the laboratory or under field conditions There is much variation in methods being used even within the same topic in different countries both with regard to materials and to applications No consensus whatsoever does exist For the construction industry it is important to be able to quantify the moisture conditions in an accurate way in various applications This state of the art report is divided into two parts Principles and Applications with altogether 28 chapters on various moisture measuring principles and a number of applications

Construction Manual for Polymers + Membranes Jan Knippers,Jan Cremers,Markus Gabler,Julian Lienhard,2012-12-17
Whether it be as translucent sheets broadly stretched membranes and inflated foil cushions or in graceful organic curves architecture today is utilizing plastics in the most disparate forms and for a wide variety of purposes Innovative technical developments are constantly improving its material properties at the same time there is a growing new awareness of its potential as a construction material While plastics used to be employed primarily as an inexpensive variant on traditional building materials they are increasingly regarded in the construction world today as a serious and viable alternative be it as supporting structures roofs facades or elements of interior design and decoration Thanks in large part to this inherent self sufficiency plastics are currently enjoying an unprecedented surge in popularity even among the international architectural avant garde

as multiwall sheets or corrugated fiber reinforced panels or as filling between glass panes And the new generation of ecological bioplastics also pays tribute to the debate on sustainability ridding plastics of their lingering reputation as environmental offenders From the history of plastics and membranes in architecture to their material properties and requirements in construction and design the *Plastics and Membranes Construction Manual* cuts to the chase providing the kind of solid and comprehensive overview of the subject that readers have come to expect from the *Im DETAIL* series Selected project examples round off the reference work and make it indispensable for the day to day life of the professional planner and for every architecture library
