HUMAN COMPUTER INTERACTION

UNIT-I

INTRODUCTION

Human-computer interaction (HCI), alternatively man-machine interaction (MMI) or computer-human interaction (CHI) is the study of interaction between people (users) and computers.

- With today's technology and tools, and our motivation to create really effective and usable interfaces and screens, why do we continue to produce systems that are inefficient and confusing or, at worst, just plain unusable? Is it because:
 1. We don't care?
 2. We don't possess common sense?
 3. We don't have the time?
 4. We still don't know what really makes good design?

DEFINITION

- "Human-computer interaction is a discipline concerned with the design, evaluation and implementation of interactive computing systems for human use and with the study of major phenomena surrounding them."

GOALS

- A basic goal of HCI is
 - to improve the interactions between users and computers
 - by making computers more usable and receptive to the user's needs.
- A long term goal of HCI is
 - to design systems that minimize the barrier between the human's cognitive model of what they want
 - to accomplish and the computer's understanding of the user's task

WHY IS HCI IMPORTANT

- User-centered design is getting a crucial role!
- It is getting more important today to increase competitiveness via HCI studies (Norman, 1990)

Huang, 2004-05-12 This book constitutes the refereed proceedings of the International Workshop on Human Computer Interaction HCI 2004 held at ECCV 2004 in Prague Czech Republic in May 2004 The 19 revised full papers presented together with an introductory overview and an invited paper were carefully reviewed and selected from 45 submissions The papers are organized in topical sections on human robot interaction gesture recognition and body tracking systems and face and head **Human-computer Interaction** Keith Andrews, 2017 *Data Mining and Machine Learning Applications* Rohit Raja, Kapil Kumar Nagwanshi, Sandeep Kumar, K. Ramya Laxmi, 2022-03-02 DATA MINING AND MACHINE LEARNING APPLICATIONS The book elaborates in detail on the current needs of data mining and machine learning and promotes mutual understanding among research in different disciplines thus facilitating research development and collaboration Data the latest currency of today's world is the new gold In this new form of gold the most beautiful jewels are data analytics and machine learning Data mining and machine learning are considered interdisciplinary fields Data mining is a subset of data analytics and machine learning involves the use of algorithms that automatically improve through experience based on data Massive datasets can be classified and clustered to obtain accurate results The most common technologies used include classification and clustering methods Accuracy and error rates are calculated for regression and classification and clustering to find actual results through algorithms like support vector machines and neural networks with forward and backward propagation Applications include fraud detection image processing medical diagnosis weather prediction e-commerce and so forth The book features A review of the state of the art in data mining and machine learning A review and description of the learning methods in human computer interaction Implementation strategies and future research directions used to meet the design and application requirements of several modern and real time applications for a long time The scope and implementation of a majority of data mining and machine learning strategies A discussion of real time problems Audience Industry and academic researchers scientists and engineers in information technology data science and machine and deep learning as well as artificial intelligence more broadly *Human-Computer Interface Technologies for the Motor Impaired* Dinesh K. Kumar, Sridhar Poosapadi Arjunan, 2015-10-22 Human Computer Interface Technologies for the Motor Impaired examines both the technical and social aspects of human computer interface HCI Written by world class academic experts committed to improving HCI technologies for people with disabilities this all inclusive book explores the latest research and offers insight into the current limitat Human-Computer Interaction Steve Howard, Judy Hammond, Gitte Lindgaard, 1997-07-31 This is the proceedings of the TC13 flagship conference held biannually It reflects the state of the art in HCI in 1997 It covers a broad range of the most important developments in HCI focusing on international issues in theory interface tools and architecture HCI applications and HCI development issues Formal Methods in Human-Computer Interaction Philippe Palanque, Fabio

Paternò,1998 This volume examines the proposition that formal methods are one of the conceptual tools that can support the design of Interactive Systems understanding of their behaviour and reasoning about their properties All the approaches considered take into account some aspect of the Web environment which is one of the most successful software products of recent years millions of people use it every day in order to search for exchange and modify information As the case study in this volume it provides a familiar background against which problems can be discussed Book jacket **Human-computer Interaction** Peter Johnson,1992 This text provides an overview of the fundamental aspects of cognitive psychology which introduce the reader to the theoretical and empirical findings about human memory learning knowledge representation and skill acquisition The coverage of these topics in the early chapters is related to HCI by providing examples and illustrations of user interface designs The book then considers the range of models that have been developed in HCI giving examples of where these models have been used and discussing the strengths and weaknesses of the various approaches
