The Pros and Cons of Using Chatbots Adrian Wallwork, 2025-11-09 Problem The world has got itself in a muddle with AI and particularly with chatbots There is a lot of misunderstanding and far too much focus on the supposed negative aspects formulaic style of chatbot writing bias inherent in many chatbot answers and generated texts lack of inclusivity educators mistaken thinking that they can intuitively tell the difference between a human generated text and a bot generated text and that by default a human text is always better mistaken attitudes even among students themselves that using chatbots is a form of cheating rather than a highly effective study and teaching aid too much faith given to AI detectors and too little understanding of how students are really using chatbots i e mostly to advise suggest and correct rather than generate Solution and aims The aim of the book to give clear strategies for dealing with the negatives typically associated with chatbots and at the same time highlight the invaluable help that chatbots can give all types of users Very often in the world of education both in English and non English speaking countries these features and strategies get overlooked The book will teach readers strategies for distinguishing between human and AI generated texts in order to understand that both have their pros and cons coaxing bots to produce more human like texts and at the same time detailing methods for acknowledging usage of bots in essays assignments papers etc identifying bias in their own and AI generated texts and remedying this bias avoiding plagiarism avoiding being unjustly accused of AI usage students avoiding unjustly accusing students of using AI inappropriately teachers professors journal editors The audience is thus not just non native speakers who were the main audience for the English for Academic Research series Instead this book is aimed at everyone in education yet using the same user friendly structure that has become a hallmark of the Academic Research series Outcomes Teachers and professors will be better equipped to educate their students on how to use and not use chatbots They will also learn that trusting their intuition with regard to whether a text was generated with a bot or whether their students have committed plagiarism is absolutely not failsafe and should be avoided Students will be able to deal with the recognized challenges of using chatbots ethics bias plagiarism hallucinations and AI detection

effect on customer retention through mitigated trust for services with high criticality In cases where a chatbot fails to handle the customer's service issue disclosing the chatbot identity not only lacks negative impact but even elicits a positive effect on retention These findings demonstrate that disclosing the chatbot's machine-like identity not only has undesirable consequences but can lead to positive reactions as well

Nowcasting in Chatbot Design Yang Wang, 2020 The rise of intelligent conversation agents or chatbots are responsible for the dramatic decrease in remote customer service agent jobs However chatbots in their current form are far from infallible We theorize that there is an inherent trade off between a chatbot s response relevance and conversational efficiency in the standard knowledge bank architecture Knowledge bank size increases the relevance of successfully queried results but also increases the difficulty of disambiguating user intents This inherent trade off leads to the development of unintelligent fail safe artifacts such as user confirmations We argue that in order to improve user experience and satisfaction we must decouple knowledge bank size from conversational efficiency To achieve this we first design a new artifact that we dub the sequential FAQ sFAQ and then evaluate its causal impact on user satisfaction An sFAQ uses machine learning techniques to first discover common user service journey patterns then leverage these learned patterns to predict likely subsequent inputs given any focal sequence of

inputs We show that by proactively suggesting potential questions to the user we can reduce the need for natural language input and thus reduce the need to disambiguate user intent We then use a novel application of regression discontinuity design RDD to study the causal impact of the eliminated reconfirmation dialogues on user satisfaction Combined we are able to demonstrate that by eliminating the unintelligent fail safe artifacts such as user confirmations the sFAQ will increase satisfaction Our approach of combining predictive machine learning and causal econometric analysis enables us to open the black box for the underlying causal mechanism linking sFAQ and user satisfaction This kind of mechanism identification would not be possible even with experimental testing in the field Our methods and results have useful implications for chatbot applications and user interface design science
