

RATIO ANALYSIS: Interpretation of Financial Statements

RATIO	FORMULAE	NORM	EXPLANATION
1) Profitability Ratios			
a) ROCE (Return On Capital Employed)	$(\text{PBIT} \div \text{Capital Employed}) \times 100\%$	n/a	Measures the Profit (Return) that a business generates from the resources available to it (its capital employed).
b) Net Profit Margin or %	$(\text{Net profit} \div \text{Sales}) \times 100\%$	n/a	Measures the average profit in comparison to the Sales Revenue.
c) Gross Profit Margin or %	$(\text{Gross profit} \div \text{Sales}) \times 100\%$	n/a	Measures gross profit as a % of Sales. It normally increases as the NP margin increases. If different, the Expenses ratio given below:
d) Expenses Ratio	$(\text{Operating Expenses} \div \text{Sales}) \times 100\%$	n/a	If high, the business usually has a low Net profit margin, i.e. the expenses of the business are too high.
e) Asset turnover ratio	$(\text{Sales} \div \text{Capital employed})$ times	n/a	Measures the efficiency with which the organisation uses its resources (net assets) or capital employed to generate sales.
2) Liquidity Ratios			
a) Current ratio	$\text{Current assets} \div \text{Current liabilities}$	2:1	Measures the ability of the entity to meet its debts when they fall due. It shows the extent to which current liabilities are covered by cash/assets that can be converted into cash within a reasonably short period of time.
b) Quick ratio/Acid Test ratio	$(\text{Current assets} - \text{Stock}) \div \text{current liabilities}$	1:1	Measures the <u>immediate solvency</u> of the entity or the extent to which current liabilities are covered by cash and debtors. Inventory (stock) is excluded as it is less liquid (i.e. must be sold → converted into receivables → and eventually into cash).
<i>NB - If both or either of them (Current ratio and Quick ratio) are too high, it implies that cash or current assets are being tied up instead of being reinvested so as to accumulate more cash flows into the business.</i>
