Dawoud Shenouda Dawoud,R. Peplow,2010 Today embedded systems are widely deployed in just about every piece of machinery from toasters to spacecrafts and embedded system designers face many challenges They are asked to produce increasingly complex systems using the latest technologies but these technologies are changing faster than ever They are asked to produce better quality designs with a shorter time to market They are asked to implement increasingly complex functionality but more importantly to satisfy numerous other constraints To achieve these current goals the designer must be aware of such design constraints and more importantly the factors that have a direct effect on them One of the challenges facing embedded system designers is the selection of the optimum processor for the application in hand single purpose general purpose or application specific Microcontrollers are one member of the family of the application specific processors Digital System Design concentrates on the use of a microcontroller as the embedded system s processor and how to use it in many embedded system applications The book covers both the hardware and software aspects needed to design using microcontrollers and is ideal for undergraduate students and engineers that are working in the field of digital system design

Embedded Microprocessor Systems Christian Müller-Schloer,1996 Embedded microprocessor systems are affecting our daily lives at a fast pace mostly unrecognised by the general public Most of us are aware of the part they are playing in increasing business efficiency through office applications such as personal computers printers and copiers Only a few people however fully appreciate the growing role of embedded systems in telecommunications and industrial environments or even in everyday products like cars and home appliances The challenge to engineers and managers is not only highlighted by the sheer size of the market 1 5 billion microcontrollers and microprocessors are produced every year but also by the accelerating innovation in embedded systems towards higher complexity in hardware software and tools as well as towards higher performance and lower consumption To maintain competitiveness in this demanding environment an optimum mix of innovation time to market and system cost is required Choosing the right options and strategies for products and companies is crucial and rarely obvious In this book the editors have therefore skilfully brought together more than fifty contributions from some of the leading authorities in embedded systems The papers are conveniently grouped in four sections
