**Times, Cells, and Aging** Bernard Strihler,1977-01-28 *Time Cells and Aging* 2nd Edition presents the mechanics of cell function and the relevant implications of the molecular genetic view to the aging phenomena This book explores the biology of the aging process Comprised of 11 chapters this edition starts with an overview of the causes and mechanisms underlying the gradual deterioration of structure and function characteristics of aging This text then examines the two aspects of the behavior of man including the reasoned conscious behavior and the greater dependence on reaction patterns predicted on the successful

responses of the past. Other chapters explore the relationship between aging and mortality rate in animals, which is a result of an organism's decreasing ability to function optimally in carrying out his vital functions. The final chapter deals with the implementation of a research plan relevant to understanding the primary mechanisms of the aging process.
