SUMMARY

This is an overview of the damage tolerance approaches and methodologies used for the design, certification and maintenance of composite structures at Airbus. It covers impact threat, damage detectability, inspection program, fatigue, tests and analyses. It is intended to provide directions for future research in the area of composite damage tolerance.

Keywords: Damage Tolerance, Impact, Composites, Detectability, Aircraft

DAMAGE TOLERANCE APPROACH

The starting point for setting the DT (damage tolerance) philosophy is the regulation which consists of requirements defined by the airworthiness authorities. Policies for means of compliance are defined by interpreting the requirements.

Impact Threat

Impact threat is defined by analysing damage data recorded in service. The threat is different depending on the location of the aircraft. Large amount of data covering long enough service time and large enough fleet size is essential for producing statistically significant impact threat.

Damage Detectability

Damage detectability is represented by BVID (Barely Visible Impact Damage). It is dependent on the type of inspection and is determined by analysis of detectability test data. BVID is defined for transverse impact and edge impact.

Inspection programs

Determined using a probabilistic analysis taking into account impact threat, probability of detection, load occurrence, residual strength variation, etc.

Course On Emerging Techniques For Damage Prediction And Failure Analysis Of Laminated Composite Structures

Éditions Cépaduès,2008-01-08 The course deals with the crucial central question how can one predict the evolution of damage up to and including final fracture Emerging yet mature answers will be presented First a description of today s common approaches in industrial environments will be given along with their limits regarding the design and calculation of stratified composite structures The course also emphasizes the damage mesomodel initiated at LMT Cachan and used today in a number of calculation codes This advanced yet pragmatic tool for the prediction of damage in stratified materials has become mature thanks particularly to the works of LMT Cachan on its relation to micromechanics EADS Innovation Works on its identification and DLR on its application to impact and crash problems The course aims to give engineers and researchers the most complete view possible of the state of the art and emerging techniques in damage prediction and failure analysis of laminated composite structures **Scientific and Technical Aerospace Reports** ,1992 Proceedings of the American Society for Composites, Seventeenth Technical Conference C.
