Architects must be proficient in a variety of business practices to contribute to manage or launch a successful firm. They are responsible for the same kind of legal, financial, marketing, management, and administrative activities as any other professional. Within these broad categories, however, there are many details, including professional standards and documents that are unique to the profession of architecture.

Smart Living for Smart Cities T. M. Vinod Kumar, 2020-05-05. This book, based on extensive international collaborative research, highlights the state of the art design of smart living for metropolises, megacities, and metacities, as well as at the community and neighbourhood level. Smart living is one of six main components of smart cities, the others being smart people, smart economy, smart environment, smart mobility, and smart governance. Smart living in any smart city can only be designed and implemented with active roles for smart people and smart city government, and as a joint effort combining e-Democracy, e-Governance, and ICT/IoT systems. In addition to using information and communication technologies, the Internet of Things, Internet of Governance, e-Governance, and Internet of People, e-Democracy, the design of smart living utilizes various domain-specific tools to achieve coordinated, effective, and efficient management, development, and conservation, and to improve ecological, social, biophysical, psychological, and economic well-being in an equitable manner, without compromising the sustainability of development, ecosystems, and stakeholders. This book presents case studies covering more than 10 cities, and centred on domain-specific smart living components. The book is issued in two volumes, and this volume focuses on city studies.

*Public Perception of Climate Change* Bjoern Hagen, 2015-11-06. Despite the findings on global climate change presented by the scientific community, there remains a significant gap between its recommendations and the actions of the public and policy makers. So far, scientists and the media have failed to successfully communicate the urgency of the climate change situation in such a way that long-term, comprehensive, and legally binding policy commitments are being made on the national and international level. This book examines the way the public processes information, how they perceive threats, and other perceptual factors that have a significant effect on how and to what degree climate change mitigation and adaptation strategies are supported. Understanding public risk perception plays a vital role in communicating the challenges of global climate change. Using a diverse range of international case studies, this book explores the nature of public perceptions of climate change and identifies the perception factors which have a significant impact on the public's willingness to support global climate change policies or commit to behavioral changes to reduce greenhouse gas emissions and improve urban resiliency. The comparative study of social and cultural factors, beliefs, attitudes, and trust provides an international overview of best practices regarding the design, implementation, and generation of public support for climate change policies at a global level. Offering valuable insight into climate change and risk communication, the book should be of interest to students and scholars of environment studies, politics, urban planning, and media and cultural studies.
