The book entitled Classification and Identification of Freshwater Fishes presents the general aspects of the fish identification and the systematics of fishes collected from different localities of Marathwada region of Maharashtra State. The book is organized in four main chapters. The first chapter describes the main components of General aspects classification and key for the identification of fishes. The second chapter deals with the morphological variations. The third chapter presents various measurements and counts used for the diagnosis. Finally the fourth chapter is devoted to the Systematics of fishes. We hope this book will be beneficial to the students seeking knowledge in fishery science subject at degree post graduate and research level. It provides the baseline data for the researchers and the person interested in the fishery sector.

*Dichotomous Keys* Jackson Martinez, 2020

How do scientists identify an unknown fish? In this activity students will utilize a dichotomous key to identify unknown fishes from the Chesapeake Bay and will then characterize their trophic levels based on feeding preferences and adaptations. Students will gain an understanding of organism classification, trophic level interactions, and how fishes may play different trophic roles throughout their lives.

Guide to the Identification of Genera of the Fish Order Ophidiiformes with a Tentative Classification of the Order Daniel M. Cohen, Jørgen G. Nielsen, 1978

Objectives of the paper are to provide dichotomous keys for the identification of ophidiiform genera. For each genus a brief account is presented including synonymy, a short diagnosis, a list of species, distribution, references, when possible, comments on relationships, and for most an outline drawing. The genera are organized into an hierarchical classification which divides them into two suborders: Ophidioidei which contains oviparous fishes with a high anterior nostril and Bythitoidei which contains viviparous fishes with a low anterior nostril. Ophidioidei is divided into two families: Carapidae with a vexillifer larval stage has two subfamilies: Pyramodontinae with two genera and Carapinae with four. Ophidiidae has four subfamilies: Brotulinae with a single genus Brotulotaeniinae, new family with a single genus Ophidiinae, the cusk eels with eight genera in two tribes and Neobythitinae with 38 genera. Epetriodus and Spottobrotula are new genera based on new species from the Indian Ocean. In two tribes: Bythitoidei contains two families, one of which Aphyonidae has five genera characterized by many neotenic features. Bythitidae is divided into the free-tailed Bromphycinae with 13 genera in two tribes and Bythitinae with 15 genera.
