Markov Decision Processes With Applications To Finance Universitext:

Markov Decision Processes with Applications to Finance Nicole Bäuerle, Ulrich Rieder, 2011-06-06 The theory of Markov decision processes focuses on controlled Markov chains in discrete time The authors establish the theory for general state and action spaces and at the same time show its application by means of numerous examples mostly taken from the fields of finance and operations research By using a structural approach many technicalities concerning measure theory are avoided They cover problems with finite and infinite horizons as well as partially observable Markov decision processes piecewise deterministic Markov decision processes and stopping problems The book presents Markov decision processes in action and includes various state of the art applications with a particular view towards finance It is useful for upper level undergraduates Master s students and researchers in both applied probability and finance and provides exercises without solutions

Convex Stochastic Optimization Teemu Pennanen, Ari-Pekka Perkkiö, 2024-12-18 This book studies a general class of convex stochastic optimization CSO

problems that unifies many common problem formulations from operations research financial mathematics and stochastic optimal control We extend the theory of dynamic programming and convex duality to allow for a unified and simplified treatment of various special problem classes found in the literature The extensions allow also for significant generalizations to existing problem formulations Both dynamic programming and duality have played crucial roles in the development of various optimality conditions and numerical techniques for the solution of convex stochastic optimization problems

Multiple Stopping Problems Georgy Sofronov, Krzysztof Szajowski, 2024-12-24 This book presents the theory of rational decisions involving the selection of stopping times in observed discrete time stochastic processes both by single and multiple decision makers Readers will become acquainted with the models strategies and applications of these models It begins with an examination of selected models framed as stochastic optimization challenges emphasizing the critical role of optimal stopping times in sequential statistical procedures The authors go on to explore models featuring multiple stopping and shares on leading applications particularly focusing on change point detection selection problems and the nuances of behavioral ecology In the following chapters an array of perspectives on model strategies is presented elucidating their interpretation and the methodologies underpinning their genesis Essential notations and definitions are introduced examining general theorems about solution existence and structure with an intricate analysis of optimal stopping predicaments and addressing crucial multilateral models The reader is presented with the practical application of models based on multiple stopping within stochastic processes The coverage includes a diverse array of domains including sequential statistics finance economics and the broader generalization of the best choice problem Additionally it delves into numerical and asymptotic solutions offering a comprehensive exploration of optimal stopping quandaries The book will be of interest to researchers and practitioners in fields such as economics finance and engineering It could also be used by graduate students doing a research degree in insurance economics or business analytics or an advanced undergraduate course in mathematical sciences

1.1 AN OVERVIEW OF MARKOV DECISION PROCESSES The theory of Markov Decision Processes also known under several other names including sequential stochastic optimization discrete time stochastic control and stochastic dynamic programming studies sequential optimization of discrete time stochastic systems The basic object is a discrete time stochastic system whose transition mechanism can be controlled over time Each control policy defines the stochastic process and values of objective

functions associated with this process The goal is to select a good control policy In real life decisions that humans and computers make on all levels usually have two types of impacts i they cost or save time money or other resources or they bring revenues as well as ii they have an impact on the future by influencing the dynamics In many situations decisions with the largest immediate profit may not be good in view of future events MDPs model this paradigm and provide results on the structure and existence of good policies and on methods for their calculation

Continuous-Time Markov Decision Processes Alexey Piunovskiy, Yi Zhang, 2020-11-09 This book offers a systematic and rigorous treatment of continuous time Markov decision processes covering both theory and possible applications to queueing systems epidemiology finance and other fields Unlike most books on the subject much attention is paid to problems with functional constraints and the realizability of strategies Three major methods of investigations are presented based on dynamic programming linear programming and reduction to discrete time problems Although the main focus is on models with total discounted or undiscounted cost criteria models with average cost criteria and with impulsive controls are also discussed in depth The book is self contained A separate chapter is devoted to Markov pure jump processes and the appendices collect the requisite background on real analysis and applied probability All the statements in the main text are proved in detail Researchers and graduate students in applied probability operational research statistics and engineering will find this monograph interesting useful and valuable
