Mathematical Methods for Signal and Image Analysis and Representation Luc Florack,Remco Duits,Geurt Jongbloed,Marie Colette van Lieshout,Laurie Davies,2012-01-13 Mathematical Methods for Signal and Image Analysis and Representation presents the mathematical methodology for generic image analysis tasks In the context of this book an image may be any m dimensional empirical signal living on an n dimensional smooth manifold typically but not necessarily a subset of spacetime The existing literature on image methodology is rather scattered and often limited to either a deterministic or a statistical point of view In contrast this book brings together these seemingly different points of view in order to stress their conceptual relations and formal

analogies Furthermore it does not focus on specific applications although some are detailed for the sake of illustration but on the methodological frameworks on which such applications are built making it an ideal companion for those seeking a rigorous methodological basis for specific algorithms as well as for those interested in the fundamental methodology per se Covering many topics at the forefront of current research including anisotropic diffusion filtering of tensor fields this book will be of particular interest to graduate and postgraduate students and researchers in the fields of computer vision medical imaging and visual perception

Narcís Sayols Baixeras,Sebastián Xambó Descamps,Ferran Vallverdú Bayés,Universitat Politècnica de Catalunya. Facultat de Matemàtiques i Estadística,2011 The aim of this project is to present in a systematic way the more relevant mathematical methods of signal processing and to explore how they are applied to speech and image precessing After explaining the more common parts of a standard course in signal processing we put special emphasis in two new tools that have played a significant role in signal processing in the past few years pattern theory and wavelet theory Finally we use all these techniques to implement an algorithm that detects the wallpaper group of a plane mosaic taking an image of it as input and an algorithm that returns the phoneme sequence of a speech signal The material in this memory can be grouped in two parts The first part consisting of the first six chapters deals with the theoretical foundation of signal processing It also includes

materials related to plane symmetry groups The second part consisting of the last two chapters is focussed on the applications Mathematical Reviews ,2004 *The British National Bibliography* Arthur James Wells,2001
