[Robotic Process Automation \(RPA\) - Digitization and Automation of Processes](#) Christian Langmann, Daniel Turi, 2023-01-16 This book provides a practice oriented overview of the necessary prerequisites the mode of operation and the individual steps for the successful introduction of Robotic Process Automation RPA In addition to theoretical basics practical examples from controlling and accounting illustrate the enormous potential of this technology

[Advanced Robotic Automation](#), 2023 Automating tasks through technological advancements has been an ongoing process in many industries This development can also significantly impact occupational safety and health OSH in a work environment It allows removing workers from hazardous situations and improving the quality of work This can be accomplished by automating repetitive and strenuous physical tasks with accurate and tireless machines like intelligent and artificial intelligence AI based robotic systems or by automating cognitively strenuous tasks through AI based information and communication technologies ICT Some tasks might not be fully automated but workers can still receive support through for example cobots which are collaborative robots operating in a shared space with workers An increasing number of companies employ AI and or advanced robotics Although still in their infancy in terms of deployment AI based systems for the automation of both cognitive and physical tasks as well as intelligent cobots show promise in a variety of sectors However more information is needed about how they are implemented and managed in the workplace to help ensure their safe and healthy implementation in present as well as in future applications The European Agency for Safety and Health at Work EU

OSHA has developed a number of case studies with the aim to investigate the practical implementation of AI based systems for the automation of physical and cognitive tasks and of intelligent cobots in the workplace their impact on workers how OSH is managed in relation to such systems and to gain a better understanding of the drivers barriers and success factors for the safe and healthy implementation of these systems To identify those case studies several key informants at the EU and international levels such as workers representatives and industry associations representing the targeted sectors were consulted This consultation and interviews will involved stakeholders resulted in 11 case studies ID1 ID11 that were fully developed and another 5 shorter case studies ID12 ID16 that include only basic information focusing on workplaces that are actually using these technologies This comparative report is based on these 11 case studies ID1 ID11 and includes short descriptions and categorisations of each case study Furthermore it contains a detailed analysis of the systems impact on the workers work environments and tasks Based on the case studies there is an overview of all identified opportunities and challenges associated with the named technologies The findings of the case studies are also contextualised with the results of the preceding literature analysis included in EU OSHA s publications on advanced robotics and AI based systems for the automation of tasks with a focus on where practical experience might deviate from current research trends
