Applied Numerical Methods Using MATLAB
Won Y. Yang, Wenwu Cao, Jaekwon Kim, Kyung W. Park, Ho-Hyun Park, Jingon Joung, Jong-Suk Ro, Han L. Lee, Cheol-Ho Hong, Taeho Im, 2020-03-31

This new edition provides an updated approach for students, engineers, and researchers to apply numerical methods for solving problems using MATLAB. This accessible book makes use of MATLAB software to teach the fundamental concepts for applying numerical methods to solve practical engineering and or science problems. It presents programs in a complete form so that readers can run them instantly with no programming skill, allowing them to focus on understanding the mathematical manipulation process and making interpretations of the results.

Applied Numerical Methods Using MATLAB Second Edition begins with an introduction to MATLAB usage and computational errors, covering everything from input/output of data to various kinds of computing errors, and on to parameter sharing and passing, and more. The system of linear equations is covered next, followed by a chapter on interpolation by Lagrange polynomial. The next sections look at interpolation and curve fitting, nonlinear equations, numerical differentiation, integration, ordinary differential equations, and optimization. Numerous methods such as the Simpson, Euler, Heun, Runge-Kutta, Golden Search, Nelder-Mead, and more are all covered in those chapters. The eighth chapter provides readers with matrices and Eigenvalues and Eigenvectors. The book finishes with a complete overview of differential equations. Provides examples and problems of solving electronic circuits and neural networks. Includes new sections on adaptive filters, recursive least squares estimation, Bairstow's method for a polynomial equation, and more. Explains Mixed Integer Linear Programming (MILP) and DOA (Direction of Arrival) estimation with eigenvectors. Aimed at students who do not like and or do not have time to derive and prove mathematical results.

Applied Numerical Methods Using MATLAB Second Edition is an excellent text for students who wish to develop their problem solving capability without being involved in details about the MATLAB codes. It will also be useful to those who want to delve deeper into understanding underlying algorithms and equations.
