

Large amounts of film scrap are available due to the short lifetime associated with packaging and industrial film materials such as carrier bags, dustbin liners and plastic sacks. A typical lifetime of products of this type is only two years. 100% recycle material may be used in low grade applications such as bin liners, other products such as carrier bags may incorporate scrap with the virgin material.

Again, like blow moulding, film blowing has specific material requirements in terms of melt strength, viscosity and inflation characteristics. Generally film blowing is limited to polyolefin materials, the majority of usage being of low density polyethylene (LDPE), linear low density polyethylene (LLDPE) and high density polyethylene (HDPE).

#### 1.4.6 Intrusion Moulding

The intrusion process is suited to mixed plastics. Generally they are finely ground before processing to aid dispersion. The process has elements of extrusion in that a plasticating unit is used to homogenise the mixture, which is then fed into an open mould. Once the plastic has cooled it can be ejected or removed depending on the type of mould that is used. The process is tolerant to contaminants such as mixed plastics, sand, glass, wood and paper and providing a minimum polyolefin fraction of around 40% is present. Other contaminants become embedded in this low melting fraction. This process is generally used to produce large, geometrically simple shapes such as profiles and panels for wood replacement applications such as fencing, posts and scaffolding.

#### 1.4.7 Injection-Compression Moulding

The injection-compression moulding process combines elements of both the injection moulding process and the compression moulding process.

Compared with injection moulding, there is a big reduction in the filling pressures required. There is also less orientation of the material, which can improve properties and reduce anisotropy. This can be of special importance in moulding thin-walled components where dimensional stability is important, and with transparent mouldings where good optical properties are required.

Figure 1.18 shows the formation of an injection-compression moulded product. A pre-set amount of material is injected into a partly closed mould (a). The mould then closes to the size of the desired final component, squeezing the material by compression to complete cavity filling (Figure 1.18b).

*Injection Molds and Molding* J.B. Dym,1987-04-30      *Practical Guide To Injection Blow Molding* Samuel L. Belcher,2007-03-05 Taking a straight forward approach the *Practical Guide to Injection Blow Molding* explores the entire industry from conception design costing tooling and machinery to trouble shooting testing and daily production With information for both the novice investor and the plastic industry expert this concise text is reinforced with pictures charts and figures The author a highly knowledgeable industry insider and a member of The Plastics Hall of Fame discusses the history of the industry as well as its daily workings He instructs in product and tooling design as well as material and machine selection explaining advantages and disadvantages elaborating on efficiencies that can be realized      *Practical Guide to Blow Moulding* N. C. Lee,Norman C. Lee,2006 Blow moulding is a manufacturing process used to form hollow plastic parts It evolved from the ancient art of glass blowing and it is used to particular advantage with plastic materials Celluloid was used first to blow mould baby rattles and novelties in the 1930s linear low density polyethylene was used in the 1940s for high production bottles and these days polyethylene terephthalate is used to make anything from soda bottles to highly sophisticated multilayered containers and automotive fuel tanks in the last decade When designing a product it is important to consider aspects such as a material s characteristics the processing methods available the assembly and finishing procedures and the life cycle and expected performance of the product This book presents the basics of blow moulding as well as the latest state of the art and science of the industry A key feature is the approach of discussing the basics and then taking the reader through the entire process from design development through to final production

**Plastic Injection Molding** Robert A. Malloy,2025-11-10 This is a practical guide to injection molding based on sound engineering fundamentals It is an ideal course book for mechanical engineers with limited plastic material and injection molding experience but is also well applicable to self study or reference It starts with an overview of plastic material fundamentals Each section includes material considerations associated with the injection molding process For example the molecular weight section shows that use of lower molecular weight plastics are commonly used for the injection molding to minimize orientation reduce fill time improve knit line strength Then the basics of the injection molding machine tooling
