

The Rising Sea

Francis Russell Hart

The Rising Sea:

The Rising Sea Ravi Vakil, 2025-10-21 An accessible motivated introduction to one of the most dynamic areas of mathematics Decades ago Mumford wrote that algebraic geometry seems to have acquired the reputation of being esoteric exclusive and very abstract with adherents who are secretly plotting to take over all the rest of mathematics The revolution has now fully come to pass and has fundamentally changed how we think about many fields of mathematics This book provides a thorough foundation in the powerful ideas that now shape the landscape with an informal yet rigorous exposition that builds intuition for understanding the formidable machinery It begins with a discussion of categorical thinking and sheaves and then develops the notion of schemes and varieties as examples of geometric spaces before discussing their specific aspects The book goes on to cover topics such as dimension and smoothness vector bundles and their natural generalizations and important cohomological tools and their applications Important optional topics are included in starred sections Provides a comprehensive introduction certain to become the standard on the subject Features a wealth of exercises that enable students to learn by doing Requires few prerequisites developing the tools students need to succeed from category theory and sheaf theory to commutative and homological algebra Uses an example driven approach that builds mathematical intuition Is a self contained textbook for graduate students and an essential reference for researchers

The Rising Sea Orrin H. Pilkey, Rob Young, 2010-04-16 On Shishmaref Island in Alaska homes are being washed into the sea In the South Pacific small island nations face annihilation by encroaching waters In coastal Louisiana an area the size of a football field disappears every day For these communities sea level rise isn't a distant abstract fear it's happening now and it's threatening their way of life In *The Rising Sea* Orrin H Pilkey and Rob Young warn that many other coastal areas may be close behind Prominent scientists predict that the oceans may rise by as much as seven feet in the next hundred years That means coastal cities will be forced to construct dikes and seawalls or to move buildings roads pipelines and railroads to avert inundation and destruction The question is no longer whether climate change is causing the oceans to swell but by how much and how quickly Pilkey and Young deftly guide readers through the science explaining the facts and debunking the claims of industry sponsored skeptics They also explore the consequences for fish wildlife and people While rising seas are now inevitable we are far from helpless By making hard choices including uprooting citizens changing where and how we build and developing a coordinated national response we can save property and ultimately lives With unassailable research and practical insights *The Rising Sea* is a critical first step in understanding the threat and keeping our heads above water
