The Secret Of Literacy Making The Implicit Explicit:

The Secret of Literacy ,2014 The Secret of Literacy : |b |c David Didau,2011 *What if everything you knew about education was wrong?* David Didau,2015-06-10 If you feel a bit cross at the presumption of some oik daring to suggest everything you know about education might be wrong please take it with a pinch of salt What if everything you knew about education was wrong is just a title Of course you probably think a great many things that aren t wrong The aim of the book is to help you murder your darlings David Didau will question your most deeply held assumptions about teaching and learning expose them to the fiery eye of reason and see if they can still walk in a straight line after the experience It seems reasonable to suggest that only if a theory or approach can withstand the fiercest scrutiny should it be encouraged in classrooms David makes no apologies for this why wouldn t you be sceptical of what you re told and what you think you know As educated professionals we ought to strive to assemble a more accurate informed or at least considered understanding of the world around us Here David shares with you some tools to help you question your assumptions and assist you in picking through what you believe He will stew findings from the shiny white laboratories of cognitive psychology stir in a generous dash of classroom research and serve up a side order of experience and observation Whether you spit it out or lap it up matters not If you come out the other end having vigorously and violently disagreed with him you ll at least have had to think hard about what you believe The book draws on research from the field of cognitive science to expertly analyse some of the unexamined meta beliefs in education In Part 1 Why we re wrong David dismantles what we think we know examining cognitive traps and biases assumptions gut feelings and the problem of evidence Part 2 delves deeper Through the threshold looking at progress liminality and threshold concepts the science of learning and the difference between novices and experts In Part 3 David asks us the question What could we do differently and offers some considered insights into spacing and interleaving the testing effect the generation effect reducing feedback and why difficult is desirable While Part 4 challenges us to consider What else might we be getting wrong cogitating formative assessment lesson observation grit and growth differentiation praise motivation and creativity **Making Kids Cleverer** David Didau,2018-12-20 In *Making Kids Cleverer* A manifesto for closing the advantage gap David Didau reignites the nature vs nurture debate around intelligence and offers research informed guidance on how teachers can help their students acquire a robust store of knowledge and skills that is both powerful and useful Foreword by Paul A Kirschner Given the choice who wouldn t want to be cleverer What teacher wouldn t want this for their students and what parent wouldn t wish it for their children When David started researching this book he thought the answers to the above were obvious But it turns out that the very idea of measuring and increasing children s intelligence makes many people extremely uncomfortable If some people were more intelligent where would that leave those of us who weren t The question of whether or not we can get cleverer is a crucial one If you believe that intelligence is hereditary and environmental effects are trivial you may be sceptical But environment does matter and it matters most for

children from the most socially disadvantaged backgrounds those who not only have the most to gain but who are also the ones most likely to gain from our efforts to make all kids cleverer And one thing we can be fairly sure will raise children s intelligence is sending them to school In this wide ranging enquiry into psychology sociology philosophy and cognitive science David argues that with greater access to culturally accumulated information taught explicitly within a knowledge rich curriculum children are more likely to become cleverer to think more critically and subsequently to live happier healthier and more secure lives Furthermore by sharing valuable insights into what children truly need to learn during their formative school years he sets out the numerous practical ways in which policy makers and school leaders can make better choices about organising schools and how teachers can communicate the knowledge that will make the most difference to young people as effectively and efficiently as possible David underpins his discussion with an exploration of the evolutionary basis for learning and also untangles the forms of practice teachers should be engaging their students in to ensure that they are acquiring expertise not just consolidating mistakes and misconceptions There are so many competing suggestions as to how we should improve education that knowing how to act can seem an impossible challenge Once you have absorbed the arguments in this book however David hopes you will find the simple question that he asks himself whenever he encounters new ideas and initiatives Will this make children cleverer as useful as he does Suitable for teachers school leaders policy makers and anyone involved in educations

Learning to Be Literate Deborah MacPhee,Patricia Paugh,2023-04-04 There is not one right way to teach a child to read Recent media stories about education have featured the Science of Reading whose proponents typically present the systematic teaching of phonics as a one size fits all method that guarantees reading success for all students But as literacy scholars Patricia Paugh and Deborah MacPhee demonstrate the decoding of words is only one of many skills that are central to an effective early literacy education In Learning to Be Literate they present a four part framework for active literacy learning that eschews oppositional arguments about different approaches and instead situates children as meaning makers the whole point of being literate There is no single or simple solution that will fit every child But by using the ALL framework to inform instruction educators can help young learners think deeply about ideas and language at the same time as they learn to work out the sounds and symbol systems of language
