Fluid and Thermodynamics Kolumban Hutter, Yongqi Wang, 2016-07-18 In this book fluid mechanics and thermodynamics F T are approached as interwoven not disjoint fields The book starts by analyzing the creeping motion around spheres at rest Stokes flows the Oseen correction and the Lagerstrom Kaplun expansion theories are presented as is the homotopy analysis 3D creeping flows and rapid granular avalanches are treated in the context of the shallow flow approximation and it is demonstrated that uniqueness and stability deliver a natural transition to turbulence modeling at the zero first order closure level The difference quotient turbulence model DQTM closure scheme reveals the importance of the turbulent closure schemes non locality effects Thermodynamics is presented in the form of the first and second laws and irreversibility is expressed in terms of an entropy balance Explicit expressions for constitutive postulates are in conformity with the dissipation inequality Gas dynamics offer a first application of combined F T The book is rounded out by a chapter on dimensional analysis similitude and physical experiments **Concise Chemical Thermodynamics** A.P.H.

Peters, 2010-07-02 The first two editions of Concise Chemical Thermodynamics proved to be a very popular introduction to a subject many undergraduate students perceive to be difficult due to the underlying mathematics With its concise explanations and clear examples the text has for the past 40 years clarified for countless students one of the most complicated bran *University of Toronto Studies*, 1920 *Chemical Reviews*, 1925 Essentials of Engineering Thermodynamics Clement Kleinstreuer, 2021-03-10 Explore the theories applications and core concepts of thermodynamics This hands on guide lays out the critical thermodynamics concepts rules and governing equations for engineering students and professionals Developed by an experienced academic to reduce information overload in his classroom Essentials of Engineering Thermodynamics Principles and Applications reinforces each topic through concept questions and representative problems with detailed worked out solutions Figures and illustrations throughout tie each subject to the real world You will gain a clear understanding of the laws of thermodynamics that drive our understanding of energy systems and their daily applications Coverage includes Basic thermodynamics concepts Energy transfer modes The first law of thermodynamics Macroscale mass and energy balances Transient closed systems Steady open uniform flow devices The second law of thermodynamics The T s diagram and entropy calculations Exergy or minimizing energy waste Open and closed power cycles Reversed closed cycles *25 Problems for STEM Education* Valery Ochkov, 2020-01-31 25 Problems for STEM Education introduces a new and emerging course for undergraduate STEM programs called Physical Mathematical Informatics This course corresponds with the new direction in education called STE A M Science Technology Engineering Art and Mathematics The book focuses on undergraduate university students and high school students as well as the teachers of mathematics physics chemistry and other disciplines such as the humanities This book is suitable for readers who have a basic understanding of mathematics and math software Features Contains 32 interesting problems studies and new and

unique methods of solving these physical and mathematical problems using a computer as well as new methods of teaching mathematics and physics Suitable for students in advanced high school courses and undergraduates as well as for students studying Mathematical Education at the Master s or PhD level One of the only books that attempts to bring together ST E AM techniques computational mathematics and informatics in a single unified format

**Basic Research and Technologies for Two-Stage-to-Orbit Vehicles** Dieter Jacob,Gottfried Sachs,Siegfried Wagner,2006-03-06 Focusing on basic aspects of future reusable space transportation systems and covering overall design aerodynamics thermodynamics flight dynamics propulsion materials and structures this report presents some of the most recent results obtained in these disciplines The authors are members of three Collaborative Research Centers in Aachen Munich and Stuttgart concerned with hypersonic vehicles A major part of the research presented here deals with experimental and numerical aerodynamic topics ranging from low speed to hypersonic flow past the external configuration and through inlet and nozzle Mathematicians and engineers jointly worked on aspects of flight mechanics like trajectory optimization stability control and flying qualities Structural research and development was predominantly coupled to the needs for high temperature resistant structures for space vehicles
