Using BitTorrent protocol to launch DDoS attacks Ashan Maduranga, 2015-02-10 Essay from the year 2012 in the subject Computer Science IT Security language English abstract In a nutshell what the researcher hopes to achieve by this project is to develop a practical solution to control Distributed Denial of Service DDoS attacks launched using BitTorrent protocol by tweaking the source code of an

existing open source BitTorrent client Even though BitTorrent is a useful protocol it could be misused to launch DDoS attacks Since the number who uses BitTorrent protocol is high by launching a DDoS the victim s machine could be crippled Hence as a remedy to the issue this report is formulated so that it discusses how the attacks are done and how it could be prevented For a simple analogical demonstration of what this attack does take a look at figure 1 where computer A cannot fulfill the requests of a legit user computer B this is what DDoS attack does After enhancing the security architecture of BitTorrent client this problem would not occur hence it is improved to control these attacks
