

1.4 Importance of Analyzing Algorithms

Need to recognize limitations of various algorithms for solving a problem. Need to understand relationship between problem size and running time. When is a running program not good enough? Need to learn how to analyze an algorithm's running time without coding it. Need to learn techniques for writing more efficient code. Need to recognize bottlenecks in code as well as which parts of code are easiest to optimize.

1.4.1 The Selection Problem

Problem: given a group of n numbers, determine the k^{th} largest

Algorithm 1

- Store numbers in an array
- Sort the array in descending order
- Return the number in position k

Algorithm 2

- Store first k numbers in an array
- Sort the array in descending order
- For each remaining number, if the number is larger than the k^{th} number, insert the number in the correct position of the array
- Return the number in position k

Example

Input is a sequence of integers stored in an array.

Output the minimum.

Problem: Description of Input-Output relationship.

Algorithm: A sequence of computational step that transform the input into the output.

Data Structure: An organized method of storing and retrieving data.

Our task: Given a problem, design a *correct* and *good* algorithm that solves it.

Example Algorithm A

Problem: The input is a sequence of integers stored in array.

Output the minimum.

Design Analysis And Algorithm Notes:

The Design and Analysis of Algorithms Dexter Kozen, 1992 These are my lecture notes from CS681 Design and Analysis of Algorithms a one semester graduate course I taught at Cornell for three consecutive fall semesters from 88 to 90 The course serves a dual purpose to cover core material in algorithms for graduate students in computer science preparing for their PhD qualifying exams and to introduce theory students to some advanced topics in the design and analysis of algorithms The material is thus a mixture of core and advanced topics At first I meant these notes to supplement and not supplant a textbook but over the three years they gradually took on a life of their own In addition to the notes I depended heavily on the texts A V Aho J E Hopcroft and J D Ullman *The Design and Analysis of Computer Algorithms* Addison Wesley 1975 M R Garey and D S Johnson *Computers and Intractability A Guide to the Theory of NP Completeness* W H Freeman 1979 R E Tarjan *Data Structures and Network Algorithms* SIAM Regional Conference Series in Applied Mathematics 44 1983 and still recommend them as excellent references

Analysis (Second Edition) M H Alsuwaiyel,2021-11-08 Problem solving is an essential part of every scientific discipline It has two components 1 problem identification and formulation and 2 the solution to the formulated problem One can solve a problem on its own using ad hoc techniques or by following techniques that have produced efficient solutions to similar problems This required the understanding of various algorithm design techniques how and when to use them to formulate solutions and the context appropriate for each of them This book presents a design thinking approach to problem solving in computing by first using algorithmic analysis to study the specifications of the problem before mapping the problem on to data structures then on to the situatable algorithms Each technique or strategy is covered in its own chapter supported by numerous examples of problems and their algorithms The new edition includes a comprehensive chapter on parallel algorithms and many enhancements *Fundamentals of Computing* Vangalur S.
