Machine Vision:

Handbook of Machine Vision Alexander Hornberg, 2007-02-27 With the demands of quality management and process control in an industrial environment machine vision is becoming an important issue This handbook of machine vision is written by experts from leading companies in this field It goes through all aspects of image acquisition and image processing From the viewpoint of the industrial application the authors also elucidate in topics like illumination or camera calibration Attention is paid to all hardware aspects starting from lenses and camera systems to camera computer interfaces Besides the detailed hardware descriptions the necessary software is discussed with equal profoundness This includes sections on digital image basics as well as image analysis and image processing Finally the user is introduced to general aspects of industrial applications of machine vision such as case studies and strategies for the conception of complete machine vision systems With this handbook the reader will be enabled not only to understand up to date systems for machine vision but will also be qualified for the planning and evaluation of such technology

Machine Vision Richard K. Miller, Nello Zeuch, 1989-08-31 Aimed at manufacturing managers and engineers looking for an introduction to computer vision and its potential this book discusses the areas in which machine vision is being used explains different types of machine vision hardware and software and summarizes research at several universities

Applying Machine Vision Nello Zuech, 1988 Applying Machine Vision presents a step by step analysis to determine the needs for vision systems in manufacturing processes and the necessary characteristics and features a system must have to achieve desired use It provides the reader with insight about the reality of utilizing vision systems against their promise Sufficient background is given to enable the reader to make intelligent decisions about system requirements The present state of vision technology is reviewed briefly

Understanding and Applying Machine Vision, Revised and Expanded Nello Zeuch, 2000-01-03 A discussion of applications of machine vision technology in the semiconductor electronic automotive wood food pharmaceutical printing and container industries It describes systems that enable projects to move forward swiftly and efficiently and focuses on the nuances of the engineering and system integration of machine vision technology

Three-Dimensional Machine Vision Takeo Kanade, 1987-03-31 A robot must perceive the three dimensional world if it is to be effective there Yet recovering 3 D information from projected images is difficult and still remains the subject of basic research Alternatively one can use a sensor that can provide three dimensional range information directly The technique of projecting light stripes started to be used in industrial object recognition systems as early as the 1970s and time of flight laser scanning range finders became available for outdoor mobile robot navigation in the mid eighties Once range data are obtained a vision system must still describe the scene in terms of 3 D primitives such as edges surfaces and volumes and recognize objects of interest Today the art of sensing extracting features and recognizing objects by means of three dimensional range data is one of the most exciting research areas in computer vision

Three Dimensional Machine Vision is a collection of papers dealing with three dimensional range data

The authors are pioneering researchers some are founders and others are bringing new excitement in the field I have tried to select milestone papers and my goal has been to make this book a reference work for researchers in three dimensional vision The book is organized into four parts 3 D Sensors 3 D Feature Extractions Object Recognition Algorithms and Systems and Applications Part I includes four papers which describe the development of unique capable 3 D range sensors as well as discussions of optical geometrical electronic and computational issues Mundy and Porter describe a sensor system based on structured illumination for inspecting metallic castings In order to achieve high speed data acquisition it uses multiple light stripes with wavelength multiplexing Case Jalkio and Kim also present a multi stripe system and discuss various design issues in range sensing by triangulation The numerical stereo camera developed by Altschuler Bae Altschuler Dijk Tamburino and Woolford projects space coded grid patterns which are generated by an electro optical programmable spatial light modulator Kanade and Fuhrman present a proximity sensor using multiple LEDs which are conically arranged It can measure both distance and orientation of an object's surface

Machine Vision for Inspection and Measurement Herbert Freeman,2012-12-02 Machine Vision for Inspection and Measurement contains the proceedings of the Second Annual Workshop on Machine Vision sponsored by the Center for Computer Aids for Industrial Productivity CAIP at Rutgers University and held on April 25 26 1988 in New Brunswick New Jersey The papers explore the application of machine vision to inspection and measurement and cover topics such as the problem of object pose estimation and depth recovery through inverse optics The use of machine

vision techniques in inspection of integrated circuits and semiconductor wafers is also discussed. Comprised of 11 chapters, this book opens with the problem of using fine grained parallel machines for VLSI inspection. The discussion then turns to a variety of real life applications of machine vision including inspection of integrated circuits, semiconductor wafers, TV tube glass and mechanical parts. The use of machine vision to measure the curvature of the human cornea for vision correction and contact lens fitting purposes is also considered. The remaining chapters focus on motion estimation from stereo sequences using orthographic view algorithms, photometric sampling for determining surface shape and reflectance and efficient depth recovery by means of inverse optics. A chapter addresses the question of whether the industry is ready for machine vision and comes up with some optimistic predictions. This monograph will be of interest to practitioners in the fields of computer science and applied mathematics.
