

Main Switchboard Design

Q1. What is the Australian standard for main switchboards?

Current Australian standard is AS/NZS 4806.1: 2003 (engineering from IEC 60439). The new series of standard AS/NZS 4806 will supersede the current standard in 2008 if the new standard gets published in 2008.

Q2. What is meant by STAT?

Type tested assembly (TTA) is a low voltage switchgear and controlgear assembly that is certified by its manufacturer to AS/NZS 4806.1.

Q3. What are the type tests that need to be carried out to verify compliance?

- verification of temperature rise tests
- verification of the dielectric properties
- verification of the main circuit withstand strength
- verification of the effectiveness of the protective circuit
- verification of clearance and creepage distances
- verification of mechanical operation
- verification of the degree of protection and terminal separation

Q4. Can you state type tested assembly if the switchboard construction is different to the listed arrangement or main switchboards for other different applications?

No. If manufacturers are unable to fit conventional type switchboard, new type tests have to be carried out only to see that the switchboards are likely to adversely affect the results of the T type tests listed above.

Q5. What is meant by PTTAT?

Priority type tested assembly (PTTA) is a low voltage switchgear and controlgear assembly, comprising both type tested and non-type tested arrangements. In this construction, non-type tested arrangements need to be identified (eg. be indicated etc.) from type tested arrangements. This switchboards construction is mostly used as it is not possible to cover all the possible configurations in type tested control arrangements and therefore conventional switchboard arrangements identified from type tested arrangements is more practical in most switch applications.

Q6. Do you need to perform any other tests upon PTTA from type test certified?

No. Type tests identified need to be carried out only by the manufacturer. However, tests are conducted to check factors to maintain and performance and as follows:

- Inspection of the switchboard including inspection of wiring and, if necessary, electrical test work and
 - The effectiveness of mechanical protecting elements, interlocks, locks, etc., shall be checked
 - The connections and cables shall be checked for proper fixing and the distance for proper routing
 - A visual inspection is also necessary to ensure that the prescribed degree of protection, creepage distances and clearance are maintained
 - The connections, especially shrouded and bolted connections, shall be checked for adequate contact, possibly by random tests
