

# 4-1 Study Guide and Intervention

## Classifying Triangles

**Classify Triangles by Angles** One way to classify a triangle is by the measures of its angles.

• If all three of the angles of a triangle are acute angles, then the triangle is an <b>acute triangle</b> .
• If all three angles of an acute triangle are congruent, then the triangle is an <b>equiangular triangle</b> .
• If one of the angles of a triangle is an obtuse angle, then the triangle is an <b>obtuse triangle</b> .
• If one of the angles of a triangle is a right angle, then the triangle is a <b>right triangle</b> .

**Example: Classify each triangle.**

All three angles are congruent, so all three angles have measure  $60^\circ$ . The triangle is an equiangular triangle.

The triangle has one angle that is obtuse. It is an obtuse triangle.

The triangle has one right angle. It is a right triangle.

### Exercises

Classify each triangle as *acute*, *equiangular*, *obtuse*, or *right*.
