Contemporary Linear Systems Using Matlab Ware Companion:

Contemporary Linear Systems Using MATLAB Robert D. Strum, 2000 *Contemporary Communication Systems Using MATLAB* John G. Proakis, Masoud Salehi, 2000 This supplement to any standard communication systems text is one of the first books to successfully integrate the use of MATLAB in the study of communication systems concepts and problems It has been developed for instructors and students who wish to make use of MATLAB as an integral part of their study The former will find the means by which to use MATLAB as a powerful tool to motivate students and illustrate essential theory without having to customize the applications themselves the latter will find relevant problems quickly and easily The book includes numerous MATLAB based simulations and examples of communication systems while providing a good balance of theory and hands on computer experience This Updated Printing revises the book and MATLAB files available for downloading from the Brooks Cole BookWare Companion Resource Center Web Site to MATLAB V5 **Contemporary**

Linear Systems Using MATLAB Robert D. Strum, Donald E. Kirk, 1994 This is a title in the PWS series BookWare Companion Series It is a set of correlated self contained courseware modules covering fundamental concepts in engineering and applied mathematics Students work through example problems electronically and are encouraged to experiment with problems and data in an electronic lab setting Each BookWare Companion features a software script for the electronic examples based on a popular applications software package for the IBM PC or the Macintosh and a printed volume containing computer based exploration exercises and a variety of learning aids and hints The text bolstered by illustrative examples 200 problems and MATLAB exploration exercises on the accompanying data disk should enable students to work with linear systems problems in a virtual laboratory at the computer changing problem values at will in a what if fashion

Feedback Control Problems Dean K. Frederick, Joe H. Chow, 2000 This book is the first complete text in the BookWare Companion Series TM to thoroughly integrate the use of the MATLAB computing environment into the standard sequence of courses taken by electrical engineering majors Use of this text makes it possible to focus on the problems being solved rather than on the programming necessary to obtain a solution The authors utilize a computer biased approach in which computer solutions and theory are viewed as mutually reinforcing rather than as an either or proposition Additionally they adhere to the axiom that one learns by doing rather than by listening this text features more than 100 examples 200 exercises and 250 MATLAB scripts that directly support the authors flexible treatment of discrete and continuous time This Updated Printing revises the book and code examples available for downloading from the Brooks Cole Web Site to MATLAB V5

Control Systems Using MATLAB. Linear System Modeling Levy P., 2016-11-21 In Control System Toolbox System Identification Toolbox and

Robust Control Toolbox software you represent linear systems as model objects Model objects are specialized data containers that encapsulate model data and other attributes in a structured way Model objects allow you to manipulate linear systems as single entities rather than keeping track of multiple data vectors matrices or cell arrays Model objects can represent single input single output SISO systems or multiple input multiple output MIMO systems You can represent both continuous and discrete time linear systems The main families of model objects are Numeric Models Basic representation of linear systems with fixed numerical coefficients This family also includes identified models that have coefficients estimated with System Identification Toolbox software Generalized Models Representations that combine numeric coefficients with tunable or uncertain coefficients Generalized models support tasks such as parameter studies or compensator tuning using Robust Control Toolbox tuning commands Model objects can represent individual components of a control architecture such as the plant actuators sensors or controllers You can connect model objects to build aggregate models of block diagrams that represent the combined response of multiple elements
