Towards a New Cognitive Neuroscience: Modeling Natural Brain Dynamics Klaus Gramann,Tzzy-Ping Jung,Daniel P.

Ferris,Chin-Teng Lin,Scott Makeig,2014-10-03 Decades of brain imaging experiments have revealed important insights into the architecture of the human brain and the detailed anatomic basis for the neural dynamics supporting human cognition However technical restrictions of traditional brain imaging approaches including functional magnetic resonance tomography fMRI positron emission tomography PET and magnetoencephalography MEG severely limit participants movements during experiments As a consequence our knowledge of the neural basis of human cognition is rooted in a dissociation of human cognition from what is arguably its foremost and certainly its evolutionarily most determinant function organizing our behavior so as to optimize its consequences in our complex multi scale and ever changing environment The concept of natural cognition therefore should not be separated from our fundamental experience and role as embodied agents acting in a complex partly unpredictable world To gain new insights into the brain dynamics supporting natural cognition we must overcome restrictions of traditional brain imaging technology First the sensors used must be lightweight and mobile to allow monitoring of brain activity during free participant movements New hardware technology for electroencephalography EEG and near infrared spectroscopy NIRS allows recording electrical and hemodynamic brain activity while participants are freely moving New data driven analysis approaches must allow separation of signals arriving at the sensors from the brain and from non brain sources neck muscles eyes heart the electrical environment etc Independent component analysis ICA and related blind source separation methods allow separation of brain activity from non brain activity from data recorded during experimental paradigms that stimulate natural cognition Imaging the precisely timed distributed brain dynamics that support all forms of our motivated actions and interactions in both laboratory and real world settings requires new modes of data capture and of data processing Synchronously recording participants motor behavior brain activity and other physiology as well as their physical environment and external events may be termed mobile brain body imaging MoBI Joint multi stream analysis of recorded MoBI data is a major conceptual mathematical and data processing challenge This Research Topic is one result of the first international MoBI meeting in Delmenhorst Germany in September 2013 During an intense workshop researchers from all over the world presented their projects and discussed new technological developments and challenges of this new imaging approach Several of the presentations are compiled in this Research Topic that we hope may inspire new research using the MoBI paradigm to investigate natural cognition by recording and analyzing the brain dynamics and behavior of participants performing a wide range of naturally motivated actions and interactions *Mechatronics and Intelligent Materials II* Ran Chen,Wen Pei Sung,2012-03-15 Selected peer reviewed papers from the 2012 International conference on Mechatronics and Intelligent Materials MIM 2012 May 18 19 2012 GuiLin China **Practical Biomedical Signal Analysis Using MATLAB®** Katarzyna J. [Biomedical Signal Processing and Signal Modeling](#)

Eugene N. Bruce, 2001. A biomedical engineering perspective on the theory, methods, and applications of signal processing. This book provides a unique framework for understanding signal processing of biomedical signals and what it tells us about signal sources and their behavior in response to perturbation. Using a modeling-based approach, the author shows how to perform signal processing by developing and manipulating a model of the signal source, providing a logical, coherent basis for recognizing signal types and for tackling the special challenges posed by biomedical signals, including the effects of noise on the signal, changes in basic properties, or the fact that these signals contain large stochastic components and may even be fractal or chaotic. Each chapter begins with a detailed biomedical example illustrating the methods under discussion and highlighting the interconnection between the theoretical concepts and applications. The author has enlisted experts from numerous subspecialties in biomedical engineering to help develop these examples and has made most examples available as Matlab or Simulink files via anonymous ftp. Without the need for a
