Network Design Proposal Statement Of Work:

Mobile Radio Network Design in the VHF and UHF Bands Adrian Graham, Nicholas C. Kirkman, Peter M. Paul, 2007-01-11
An essential element of radio technology and propagation is how to use radio technology and knowledge of radio propagation to design a network that meets the needs of customers. *Mobile Radio Network Design in the VHF and UHF Bands* provides the technical and fundamental knowledge required for advanced mobile radio network design to achieve this in terms that the engineer will understand and augments this with essential information gleaned from the authors' extensive experience in mobile radio network design. In this book you will find out how some of the most highly regarded radio network designers around go about designing radio networks that actually meet the needs of the network subscriber and of the network operator. It describes a well-proven framework that meets the essential need of ensuring that each step of the design project is carried out against known, unique and unambiguous requirements and that these requirements have been extensively validated against the original requirements. Reveals the secrets behind coverage design, capacity planning, interference analysis and reduction, frequency assignment and verifying that the delivered network actually performs as promised. Introduces the concept of documentary deliverables as part of the project and underlines the need for method statements, user requirements, functional tests and design specifications. Provides readers with a far greater understanding of the methods and processes necessary to bring about the successful completion of a radio network project. Highlights vital aspects of radio network projects that are not always apparent to every engineer but which may have a vital impact on the success of the project. The powerful approach used in this book will help to ensure the successful completion of every project and will be the basis for ensuring contractual compliance at every stage. It is an indispensable resource for all radio network design consultants and engineers, network operators, technical managers, radio regulation engineers and military radio network planners.

Top-down Network Design Priscilla Oppenheimer, 1999. *Top Down Network Design* is a practical and comprehensive guide to designing enterprise networks that are reliable, secure and manageable. Using illustrations and real world examples, it teaches a systematic method for network design that can be applied to campus LANs, remote access networks, WAN links and large scale internetworks. BOOK JACKET Title Summary field provided by Blackwell North America Inc. All Rights Reserved.

Data Network Design Darren L. Spohn, Tina Brown, Scott Grau, 2002. This work details the process and technologies needed to successfully design a data network in today's marketplace. It covers new technologies that have entered the market such as voice over packet offerings and dense wavelength division multiplexing. Also covered are chapters on Optical Networking, SONET, WDM and DWDM and International Networks including VPNs.
