**Gamification of the Internal Innovation Process** Julius Schöning, 2015-09-14 Bachelor Thesis from the year 2014 in the subject Business economics Offline Marketing and Online Marketing grade 1 3 Technical University of Munich TUM School of Management language English abstract Gamification has been hyped during the last years There are studies predicting an enormous rise of the rate of companies gamifying their innovation process Nevertheless the majority of those projects are supposed to fail because the application might be designed poorly In this thesis a comprehensive examination of theoretical background is delivered the providers of gamification software are ascertained case studies of some of their completed projects are analyzed and interviews are conducted with implementing consultants The thesis concludes that gamifying an innovation platform for time restricted innovation challenges can be a very powerful and successful management tool if implemented properly Open ended gamification approaches of innovation platforms usually fail to meet its business objectives in the long run because participation decreases over time **Computerworld** ,2009 *The Impact of Advanced Automation and the Cloud on Employment* Aidan Mc Carron, 2018-08-13 Master s Thesis from the year 2015 in the subject Computer Science Commercial Information Technology grade 2 1 Trinity College Dublin The University of Dublin language English abstract One of the primary fears in the current global community is the exponential growth and continued sophistication of artificial intelligence Fundamental to this concern is the wide ranging impact that this growth will not only leave on the world as we currently know it but on the place of humans in that world This has become termed as the singularity the point in time when machines will become self learning and more importantly self aware It is at this point that machines and robotics will be elevated from the current monotonous job operations to more high skilled areas This study looks into the drive towards advanced automation and the increased sophistication of artificial intelligence in conjunction with the cloud and how this growth will eventually lead to technological unemployment Some economists are predicting up to a 50% job loss or more Predicting the future typically means extrapolating the past It often fails to anticipate breakthroughs But it is precisely those unpredictable breakthroughs in computing that could have the biggest impact on the workforce Education and up skilling current workers will be the only way to ensure continued relevance within an automated workforce By focusing on education it will ensure

people are best placed to take advantage of this new age of advanced automation This dissertation concludes that innovation through creativity will ensure employment opportunities continue to present themselves to those best prepared for such changes
