Wooldridge, 2010-10-01 The second edition of a comprehensive state of the art graduate level text on microeconomic methods substantially revised and updated The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research cross section and data panel methods By focusing on assumptions that can be given behavioral content the book maintains an appropriate level of rigor while emphasizing intuitive thinking The analysis covers both linear and nonlinear models including models with dynamics and or individual heterogeneity In addition to general estimation frameworks particular methods of moments and maximum likelihood specific linear and nonlinear methods are covered in detail including probit and logit models and their multivariate Tobit models models for count data censored and missing data schemes causal or treatment effects and duration analysis Econometric Analysis of Cross Section and Panel Data was the first graduate econometrics text to focus on microeconomic data structures allowing assumptions to be separated into population and sampling assumptions This second edition has been substantially updated and revised Improvements include a broader class of models for missing data problems more detailed treatment of cluster problems an important topic for empirical researchers expanded discussion of generalized instrumental variables GIV estimation new coverage based on the author's own recent research of inverse probability weighting a more complete framework for estimating treatment effects with panel data and a firmly established link between econometric approaches to nonlinear panel data and the generalized estimating equation literature popular in statistics and other fields New attention is given to explaining when particular econometric methods can be applied the goal is not only to tell readers what does work but why certain obvious procedures do not The numerous included exercises both theoretical and computer based allow the reader to extend methods covered in the text and discover new insights

Essays in Panel Data Econometrics Marc Nerlove, 2005-11-10 This volume collects seven of Marc Nerlove's previously published

classic essays on panel data econometrics written over the past thirty five years together with a cogent essay on the history of the subject which began with George Biddell Airey's monograph published in 1861 Since Professor Nerlove's 1966 Econometrica paper with Pietro Balestra panel data and methods of econometric analysis appropriate to such data have become increasingly important in the discipline The principal factors in the research environment affecting the future course of panel data econometrics are the phenomenal growth in the computational power available to the individual researcher at his or her desktop and the ready availability of data sets both large and small via the Internet The best way to formulate statistical models for inference is motivated and shaped by substantive problems and understanding of the processes generating the data at hand to resolve them The essays illustrate both the role of the substantive context in shaping appropriate methods of inference and the increasing importance of computer intensive methods

Econometric Analysis of Panel Data Models with Multifactor Error Structures Hande Karabiyik, Franz C. Palm, Jean-Pierre Urbain, 2019 Economic panel data often exhibit cross sectional dependence even after conditioning on appropriate explanatory variables Two approaches to modeling cross sectional dependence in economic panel data are often used the spatial dependence approach which explains cross sectional dependence in terms of distance among units and the residual multifactor approach which explains cross sectional dependence by common factors that affect individuals to a different extent This article reviews the theory on estimation and statistical inference for stationary and nonstationary panel data with cross sectional dependence particularly for models with a multifactor error structure Tests and diagnostics for testing for unit roots slope homogeneity cointegration and the number of factors are provided We discuss issues such as estimating common factors dealing with parameter plethora in practice testing for structural stability and nonlinearity and dealing with model and parameter uncertainty Finally we address issues related to the use of these economic panel models

Econometrics of Panel Data Erik Biørn, 2016-10-17 Panel data is a data type increasingly used in research in economics social sciences and medicine Its primary characteristic is that the data variation goes jointly over space across individuals firms countries etc and time over years months etc Panel data allow examination of problems that cannot be handled by cross section data or time series data Panel data analysis is a core field in modern econometrics and multivariate statistics and studies based on such data occupy a growing part of the field in many other disciplines The book is intended as a text for master and advanced undergraduate courses It may also be useful for PhD students writing theses in empirical and applied economics and readers conducting empirical work on their own The book attempts to take the reader gradually from simple models and methods in scalar simple vector notation to more complex models in matrix notation A distinctive feature is that more attention is given to unbalanced panel data the measurement error problem random coefficient approaches the interface between panel data and aggregation and the interface between unbalanced panels and truncated and censored data sets The 12 chapters are intended to be largely self contained although there is also natural progression Most of the chapters contain commented

examples based on genuine data mainly taken from panel data applications to economics Although the book inter alia through its use of examples is aimed primarily at students of economics and econometrics it may also be useful for readers in social sciences psychology and medicine provided they have a sufficient background in statistics notably basic regression analysis and elementary linear algebra *Essays on the Econometric Analysis of Panel Data* Keisuke Hirano,1998 **The Econometric Analysis of Non-Stationary Spatial Panel Data** Michael Beenstock,Daniel Felsenstein,2019-03-27 This monograph deals with spatially dependent nonstationary time series in a way accessible to both time series econometricians wanting to understand spatial econometrics and spatial econometricians lacking a grounding in time series analysis After charting key concepts in both time series and spatial econometrics the book discusses how the spatial connectivity matrix can be estimated using spatial panel data instead of assuming it to be exogenously fixed This is followed by a discussion of spatial nonstationarity in spatial cross section data and a full exposition of non stationarity in both single and multi equation contexts including the estimation and simulation of spatial vector autoregression VAR models and spatial error correction ECM models The book reviews the literature on panel unit root tests and panel cointegration tests for spatially independent data and for data that are strongly spatially dependent It provides for the first time critical valuesfor panel unit root tests and panel cointegration tests when the spatial panel data are weakly or spatially dependent The volume concludes with a discussion of incorporating strong and weak spatial dependence in non stationary panel data models All discussions are accompanied by empirical testing based on a spatial panel data of house prices in Israel **Econometric Analysis of Panel Data** Vassilis Hajivassiliou,2009 **The Use of Panel Data in Econometric Analysis** Gordon C. R. Kemp,1991 **Panel Data Econometrics** Donggyu Sul,2019-02-07 In the last 20 years econometric theory on panel data has developed rapidly particularly for analyzing common behaviors among individuals over time Meanwhile the statistical methods employed by applied researchers have not kept up to date This book attempts to fill in this gap by teaching researchers how to use the latest panel estimation methods correctly Almost all applied economics articles use panel data or panel regressions However many empirical results from typical panel data analyses are not correctly executed This book aims to help applied researchers to run panel regressions correctly and avoid common mistakes The book explains how to model cross sectional dependence how to estimate a few key common variables and how to identify them It also provides guidance on how to separate out the long run relationship and common dynamic and idiosyncratic dynamic relationships from a set of panel data Aimed at applied researchers who want to learn about panel data econometrics by running statistical software this book provides clear guidance and is supported by a full range of online teaching and learning materials It includes practice sections on MATLAB STATA and GAUSS throughout along with short and simple econometric theories on basic panel regressions for those who are unfamiliar with econometric theory on traditional panel regressions *ECONOMETRIC MODELS WITH PANEL DATA. APPLICATIONS WITH STATA* CESAR PEREZ LOPEZ,2022 This book explores the panel data

econometrics through STATA The most important topics are the following Linear regression estimators in panel data models fixed and random effects heteroskedasticity and autocorrelation in panel data models instrumental variables and two stage least squares in panel data models dynamic panel data models logit and probit panel data models censored panel data models count panel data models Tobit panel data models Poisson panel data models negative binomial panel data models and others models with panel data
