Beautiful Code Leading Programmers Explain How They Think Andy Oram:

Software Design by Example Greg Wilson, 2024-04-05 The best way to learn design in any field is to study examples and some of the best examples of software design come from the tools programmers use in their own work Software Design by Example A Tool Based Introduction with Python therefore builds small versions of the things programmers use in order to demystify them and give some insights into how experienced programmers think From a file backup system and a testing framework to a regular expression matcher a browser layout engine and a very small compiler we explore common design patterns show how making code easier to test also makes it easier to reuse and help readers understand how debuggers profilers package managers and version control systems work so that they can use them more effectively This material can be used for self paced study in an undergraduate course on software design or as the core of an intensive weeklong workshop for working programmers Each chapter has a set of exercises ranging in size and difficulty from half a dozen lines to a full day s work Readers should be familiar with the basics of modern Python but the more advanced features of the language are explained and illustrated as they are introduced All the written material in this project can be freely reused under the terms of the Creative Commons Attribution license while all of the software is made available under the terms of the Hippocratic License All proceeds from sale of this book will go to support the Red Door Family Shelter in Toronto

Features Teaches software design by showing programmers how to build the tools they use every day Each chapter includes exercises to help readers check and deepen their understanding All the example code can be downloaded re used and modified under an open license

Computing for Ordinary Mortals Robert St. Amant, 2013. In *Computing for Ordinary Mortals*, cognitive scientist and AI expert Robert St. Amant explains what he calls the really interesting part of computing, which are the ideas behind the technology. They're powerful ideas and the foundations for everything that computers do, but they are little-discussed. This book will not tell you how to use your computer, but it will give you a conceptual tour of how it works. Some of the ideas, like modularity, which are so embedded in what we do as humans, can also give us insight into our own daily activities, how we interact with other people, and in some cases even what's going on in our heads. Computing is all around us, and to quote Richard Hamming, the influential mathematician and computer scientist: "The purpose of computing is insight, not numbers, and it is this insight that informs the entire book."

Coders at Work Peter Seibel, 2009-12-21. Peter Seibel interviews 15 of the most interesting computer programmers alive today in *Coders at Work*, offering a companion volume to Apress's highly acclaimed best-seller *Founders at Work* by Jessica Livingston. As the words "at work" suggest, Peter Seibel focuses on how his interviewees tackle the day-to-day work of programming, while revealing much more, like how they became great programmers, how they recognize programming talent in others, and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the *Coders at Work* web site (www.codersatwork.com). The complete list was 284 names. Having digested everyone's feedback, we selected 15 folks who've been kind enough to agree to be interviewed: Frances Allen, Pioneer in optimizing compilers, first woman to win the Turing Award (2006) and first female IBM fellow; Joe Armstrong, Inventor of Erlang; Joshua Bloch, Author of the Java Collections Framework, now at Google; Bernie Cosell, One of the main software guys behind the original ARPANET IMPs and a master debugger; Douglas Crockford, JSON founder, JavaScript architect at Yahoo; L. Peter Deutsch, Author of Ghostscript, implementer of Smalltalk 80 at Xerox PARC and Lisp 1.5 on PDP-1; Brendan Eich, Inventor of JavaScript, CTO of the Mozilla Corporation; Brad Fitzpatrick, Writer of LiveJournal, OpenID, memcached, and Perlbal; Dan Ingalls, Smalltalk implementor and designer; Simon Peyton Jones, Coinventor of Haskell and lead designer of Glasgow Haskell Compiler; Donald Knuth, Author of *The Art of Computer Programming* and creator of TeX; Peter Norvig, Director of Research at Google and author of the standard text on AI; Guy Steele, Coinventor of Scheme and part of the Common Lisp Gang of Five, currently working on Fortress; Ken Thompson, Inventor of UNIX; Jamie Zawinski, Author of XEmacs and early Netscape/Mozilla hacker.

Fluent Python Luciano Ramalho, 2015-07-30. Python's simplicity lets you become

productive quickly but this often means you aren't using everything it has to offer. With this hands-on guide you'll learn how to write effective idiomatic Python code by leveraging its best and possibly most neglected features. Author Luciano Ramalho takes you through Python's core language features and libraries and shows you how to make your code shorter, faster, and more readable at the same time. Many experienced programmers try to bend Python to fit patterns they learned from other languages and never discover Python features outside of their experience. With this book, those Python programmers will thoroughly learn how to become proficient in Python 3. This book covers Python data model, understand how special methods are the key to the consistent behavior of objects, Data structures take full advantage of built-in types and understand the text vs bytes duality in the Unicode age, Functions as objects, view Python functions as first-class objects and understand how this affects popular design patterns, Object-oriented idioms, build classes by learning about references, mutability, interfaces, operator overloading and multiple inheritance, Control flow leverage context managers, generators, coroutines, and concurrency with the concurrent futures and asyncio packages, Metaprogramming, understand how properties, attribute descriptors, class decorators, and metaclasses work.

Beautiful Code Greg Wilson, Andy Oram, 2007-06-26 How do the experts solve difficult problems in software development? In this unique and insightful book, leading computer scientists offer case studies that reveal how they found unusual, carefully designed solutions to high-profile projects. You will be able to look over the shoulder of major coding and design experts to see problems through their eyes. This is not simply another design patterns book or another software engineering treatise on the right and wrong way to do things. The authors think aloud as they work through their project's architecture, the tradeoffs made in its construction, and when it was important to break rules. This book contains 33 chapters contributed by Brian Kernighan, Karl Fogel, Jon Bentley, Tim Bray, Elliotte Rusty Harold, Michael Feathers, Alberto Savoia, Charles Petzold, Douglas Crockford, Henry S. Warren Jr., Ashish Gulhati, Lincoln Stein, Jim Kent, Jack Dongarra, and Piotr Luszczek, Adam Kolawa, Greg Kroah-Hartman, Diomidis Spinellis, Andrew Kuchling, Travis E. Oliphant, Ronald Mak, Rogerio Atem de Carvalho, and Rafael Monnerat, Bryan Cantrill, Jeff Dean, and Sanjay Ghemawat, Simon Peyton Jones, Kent Dybvig, William Otte, and Douglas C. Schmidt, Andrew Patzer, Andreas Zeller, Yukihiro Matsumoto, Arun Mehta, TV Raman, Laura Wingerd, and Christopher Seiwald, and Brian Hayes. Beautiful Code is an opportunity for master coders to tell their story. All author royalties will be donated to Amnesty International.

A Programmer's Rantings: On Programming-Language Religions, Code Philosophies, Google Work Culture, and Other Stuff Steve Yegge, 2012-12-01 This book grew out of a lot of angst. Well, and wine. Put enough angst in me and I'll start ranting. Pour in some wine and the rants get mean and funny. I still go back and read these posts now and then and I always laugh. I was so mean. My angst grew out of traveling different roads than most programmers. Those roads forced me to see the world differently. Now I see all sorts of patterns that many experienced programmers fail to see because well, to put it bluntly, they're stuck in ruts. Over the past 25 years, I've done a bunch of dramatically different types of programming, and I've also written

far more code than any programmer ever should The long roads I've traveled have basically given me a sixth sense I see dead people And it sucks If you're ever unlucky enough to acquire a dreadful sixth sense there are really only two choices you can be angry and depressed about it or you can laugh about it So I try to laugh It's hard but I'm getting better at it The wine helps Practice helps too You need to get in the habit of laughing at yourself at others at the crazy world we live in or in time you'll just stop laughing altogether When I first started ranting I was the ugly American stomping around in my posts and essentially yelling What the hell is wrong with all you people But over the next ten years or so I like to think I've grown into more of an amateur software anthropologist I now take cultural relativism seriously and I try hard not to judge people who think differently from me Of course I don't mind poking fun at them because I don't mind people poking fun at me And ultimately I would like to convince undecided programmers to share my view of the programming world because programming works best if everyone nearby does it the same way So I'll continue to argue that my view which I've recently taken to calling software liberalism is a perfectly valid and perhaps even preferable way to do a lot of software development Converting everyone to be more liberal is doomed to fail of course But even so I hope I can still help people in radically different software cultures to understand each other better I'm going to keep ranting because it appears to be the only way to make a message sink in to a very large audience Some people still tell me that my blog posts are too long They tell me I could have made my point in under a hundred words I have noticed that this complaint comes most often from people who disagree with me They're really just saying they want less work to voice their disagreement But even some folks who agree with me find the posts too long to carry their attention and they complain too They're missing the point though The posts aren't too long You need a certain minimum heft to penetrate Through years of trial and error I've found that the best way to get a lot of people to listen to you is to tell them a story And you can't spin a good yarn without settling in and enjoying the ride So that's what this book is It's really a bunch of stories Each might take the form of an article essay guide rant or occasionally a fiction tale But behind the structure each one of them is sharing a story Even if you don't always agree I'm hoping you'll at least find the stories entertaining and with luck sometimes even eye opening The guys at Hyperink chose which of my posts to include by and large and they also came up with the overall chapter organization I made a couple of tweaks but what you're looking at is largely their vision of how to curate this stuff into a cohesive book I think they did an admirable job I hope you enjoy the journey as much as I did Steve Yegge August 2012
