**Statistics and Chemometrics for Analytical Chemistry** James N. Miller, Jane Charlotte Miller, 2000  
This popular textbook gives a clear and lucid account of the underlying principles of statistical methods. The fourth edition has been revised and updated to reflect the growing popularity of statistics and chemometric methods and new approaches in optimization and experimental design. The authors have also addressed the quality of analytical chemistry data and experimental results, an area of increasing concern to chemists testing the safety of food and medicines. This book will suit undergraduate, M.Sc. and graduate courses in Analytical Chemistry and related topics and will also be valuable for researchers and chemists working in analytical chemistry everywhere.

**Applied Chemometrics for Scientists** Richard G. Brereton, 2007-04-02  
The book introduces most of the basic tools of chemometrics including experimental design, signal analysis, statistical methods for analytical chemistry and multivariate methods. It then discusses a number of important applications including food chemistry, biological pattern recognition, reaction monitoring, optimisation of processes, medical applications. The book arises from a series of short articles that have been developed over four years on Chemweb ([www.chemweb.com](http://www.chemweb.com)).

**Chemometrics** Foo-Tim Chau, Yi-Zeng Liang, Junbin Gao, Xue-Guang Shao, 2004-03-25  
Wavelet Transformations and Their Applications in Chemistry pioneers a new approach to classifying existing chemometric techniques for data analysis in one and two dimensions using a practical applications approach to illustrating chemical examples and problems. Written in a simple, balanced applications based style, the book is geared to both theorists and non-mathematicians. This text emphasizes practical applications in chemistry. It employs straightforward language and examples to show the power of wavelet transforms without overwhelming mathematics. Reviews other methods and compares wavelets with other techniques that provide similar capabilities. It uses examples illustrated in MATLAB codes to assist chemists in developing applications and includes access to a supplementary Web site providing code and data sets for work examples. Wavelet Transformations and Their Applications in Chemistry will prove essential to professionals and students working in analytical chemistry and process chemistry as well as physical chemistry, spectroscopy and statistics.

**The Role of Chemical Markers and Chemometrics in the Identification of Grasses Used as Food in Pre-agrarian South West Asia** Michelle Cave, 2004 This work explores the way in which novel chemical criteria can be used to identify charred remains of grains of small grained grasses used as food by pre agrarian hunter gatherers in south western Asia but which have hitherto rarely been identified with any precision The grass family Gramineae or Poaceae is the most diverse abundant and widespread family of higher plants on the planet Grasses correspondingly have enormous ecological and economic importance worldwide Their importance is reflected in the prominent role of grain from wild grasses in hunter gatherer subsistence In order to reconstruct past subsistence practices and diet especially of arid zone hunter gatherers it is important to identify the remains of grasses recovered from archaeological sites However the recovered grass remains are most often charred therefore the interpretive potential can be realized only if these charred remains are accurately identified at the level of genus and in some cases species There are

enormous problems in identifying charred remains particularly when relying totally on gross morphological criteria There is therefore a need for alternative criteria such as that utilized by chemical analytical techniques The core rationale in applying the different chemical techniques is the same throughout grains are taken from modern grasses of known identity and spanning a spectrum of taxa likely to include all the charred ancient specimens to be identified the unknowns These modern grains are then analysed to generate spectra Equivalent spectra from unknowns are then compared with those from the modern grains to effect an identification Standard practice has hitherto involved comparing the two sets of spectra know and unknowns by visual inspection i e by eye However identifications based on such comparisons are inevitably to some degree untestable and unrepeatable and this represents a long standing problem in chemistry generally In the present project the author has therefore explored the use of chemometrics i e the use of statistical systems to compare spectra in a manner that is rigorously testable and repeatable This is an entirely new development and has never previously been applied in the analysis of archaeological data

**Concepts and Calculations in Analytical Chemistry, Featuring the Use of Excel**
