

Frequency domain Causal Analysis Methods based on Two Statistics

RPDC causality $j \rightarrow i$ $\hat{\lambda}_{ij}(\omega) = N \hat{\mathbf{X}}_j(\omega)^* \hat{\mathbf{V}}_j(\omega)^{-1} \hat{\mathbf{X}}_j(\omega)$

Under the null hypothesis of $|A_{ij}(\omega)|^2 = 0$, $N \rightarrow \infty$, $\hat{\lambda}_{ij}(\omega) \rightarrow \chi^2_{k_i}$ distribution

RPDC can be directly used to measure the strength of causality from x_j to x_i at ω

$\chi^2_{k_i}$ $\hat{\lambda}_{ij}(\omega_2) < \hat{\lambda}_{ij}(\omega_1)$

$S_{max}(x_j \rightarrow x_i) = \frac{1}{2\pi} \int_0^{2\pi} \hat{\lambda}_{ij}(\omega) d\omega$

Mapping Psychopathology with fMRI and Effective Connectivity Analysis Baojuan Li,Adeel Razi,Karl J.

Friston,2017-06-22 There is a growing appreciation that many psychiatric and neurological conditions can be understood as functional disconnection syndromes as reflected in aberrant functional integration and synaptic connectivity This Research Topic considers recent advances in understanding psychopathology in terms of aberrant effective connectivity as measured noninvasively using functional magnetic resonance imaging fMRI Recently there has been increasing interest in inferring directed connectivity effective connectivity from fMRI data Effective connectivity refers to the influence that one neural system exerts over another and quantifies the directed coupling among brain regions and how they change with pathophysiology Compared to functional connectivity effective connectivity allows one to understand how brain regions interact with each other in terms of context sensitive changes and directed coupling and therefore may provide mechanistic insights into the neural basis of psychopathology Established models of effective connectivity include psychophysiological interaction PPI structural equation modeling SEM and dynamic causal modelling DCM DCM is unique because it explicitly models the interaction among brain regions in terms of latent neuronal activity Moreover recent advances in DCM such as stochastic and spectral DCM make it possible to characterize the interaction between different brain regions both at rest and during a cognitive task

Pattern Recognition Gernot A. Fink,Simone Frintrop,Xiaoyi Jiang,2019-10-24 This book constitutes the proceedings of the 41st DAGM German Conference on Pattern Recognition DAGM GCPR 2019 held in Dortmund Germany in September 2019 The 43 revised full papers presented were carefully reviewed and selected from 91 submissions The German Conference on Pattern Recognition is the annual symposium of the German Association for Pattern Recognition DAGM It is the national venue for recent advances in image processing pattern recognition and computer vision and it follows the long tradition of the DAGM conference series

Sport and Exercise Psychophysiology Marcelo Bigliassi,Edson Filho,2025-06-11 This book addresses a critical gap in the literature serving as a foundational resource for a rapidly evolving field that lacks a comprehensive reference point It offers an in depth exploration of research methods in exercise psychophysiology beginning with a historical perspective before delving into key psychophysiological techniques and advanced methodologies for processing and interpreting biological data collected during exercise Beyond methodology the book examines core topics such as exercise tolerance motivation emotion regulation attentional control and cognition unpacking the intricate psychophysiological mechanisms driving these phenomena Designed to equip researchers and practitioners alike it provides the necessary tools to design rigorous experiments and effectively apply complex psychophysiological methods in movement related contexts This resource is essential for anyone seeking a deeper understanding of how mind and body interact in the realm of exercise

Studies at the Crossroads of Management & Economics Samet Evci,Anshuman Sharma,2020-03-15 Business and economics which are among the disciplines of social

science examine and discuss many issues affecting human life from various perspectives In this context prominent subjects in business and economics are examined by authors with different disciplines and approaches in this book The book consists of three chapters economic theory and policy financial accounting and auditing strategic management and marketing The subjects in each chapter are examined in an understandable way in accordance with the business managers investors and researchers

Macroeconomic Forecasting in the Era of Big Data Peter Fuleky, 2019-11-28 This book surveys big data tools used in macroeconomic forecasting and addresses related econometric issues including how to capture dynamic relationships among variables how to select parsimonious models how to deal with model uncertainty instability non stationarity and mixed frequency data and how to evaluate forecasts among others Each chapter is self contained with references and provides solid background information while also reviewing the latest advances in the field Accordingly the book offers a valuable resource for researchers professional forecasters and students of quantitative economics

European Journal of Tourism Research , 2018-07-30 The European Journal of Tourism Research is an academic journal in the field of tourism published by Varna University of Management Bulgaria Its aim is to provide a platform for discussion of theoretical and empirical problems in tourism Publications from all fields connected with tourism such as tourism management tourism marketing sociology psychology tourism geography political sciences mathematics tourism statistics tourism anthropology culture information technologies in tourism and others are invited The journal is open to all researchers Young researchers and authors from Central and Eastern Europe are encouraged to submit their contributions Regular Articles in the European Journal of Tourism Research should normally be between 4 000 and 20 000 words Major research articles of between 10 000 and 20 000 are highly welcome Longer or shorter papers will also be considered The journal publishes also Research Notes of 1 500 2 000 words Submitted papers must combine theoretical concepts with practical applications or empirical testing The European Journal of Tourism Research includes also the following sections Book Reviews announcements for Conferences and Seminars abstracts of successfully defended Doctoral Dissertations in Tourism case studies of Tourism Best Practices The European Journal of Tourism Research is published in three Volumes per year The full text of the European Journal of Tourism Research is available in the following databases EBSCO Hospitality and Tourism Complete CABI Leisure Recreation and Tourism ProQuest Research Library Individual articles can be rented via journal's page at DeepDyve The journal is indexed in Scopus and Thomson Reuters Emerging Sources Citation Index The editorial team welcomes your submissions to the European Journal of Tourism Research

Frequency-domain Characterization of Power Distribution Networks Dr. Istvan Novak, Jason R. Miller, 2007 Power distribution networks PDNs are key components in today's high performance

electronic circuitry They ensure that circuits have a constant stable supply of power The complexities of designing PDNs have been dramatically reduced by frequency domain analysis This book examines step by step how electrical engineers can use frequency domain techniques to accurately simulate measure and model PDNs It guides engineers through the ins and outs of these techniques to ensure they develop the right PDN for any type of circuit Circuit engineers gain valuable insight from the book s best practices for measuring simulating and modeling Practical examples illustrate every phase in PDN development from material characterization and component design to modeling the entire network

Understanding the Evolution of Regional Economic Development and Tourism Efficiency in China Tsung Pao Wu,2024-07-16 This insightful volume delves into the intricate relationship between economic growth and tourism effectiveness in China s diverse regions With a focus on practical insights and accessible language this book is essential reading for policymakers economists and tourism professionals seeking to understand the dynamics of regional development By emphasizing China s unique experiences the text offers valuable lessons applicable to regions worldwide Engaging and concise it navigates complex concepts with clarity making it accessible to a global audience Highlighting key trends and emerging theories this work serves as a vital resource for anyone interested in the intersection of economic development and tourism efficiency

Information-based methods for neuroimaging: analyzing structure, function and dynamics Jesus M. Cortés,Daniele Marinazzo,Miguel Angel Muñoz,2015-05-07 The aim of this Research Topic is to discuss the state of the art on the use of Information based methods in the analysis of neuroimaging data Information based methods typically built as extensions of the Shannon Entropy are at the basis of model free approaches which being based on probability distributions rather than on specific expectations can account for all possible non linearities present in the data in a model independent fashion Mutual Information like methods can also be applied on interacting dynamical variables described by time series thus addressing the uncertainty reduction or information in one variable by conditioning on another set of variables In the last years different Information based methods have been shown to be flexible and powerful tools to analyze neuroimaging data with a wide range of different methodologies including formulations based on bivariate vs multivariate representations frequency vs time domains etc Apart from methodological issues the information bit as a common unit represents a convenient way to open the road for comparison and integration between different measurements of neuroimaging data in three complementary contexts Structural Connectivity Dynamical Functional and Effective Connectivity and Modelling of brain activity Applications are ubiquitous starting from resting state in healthy subjects to modulations of consciousness and other aspects of pathophysiology Mutual Information based methods have provided new insights about common principles in brain organization showing the existence of an active default network when the brain is at rest It is not clear however how this default network is generated the different modules are intra interacting or disappearing in the presence of stimulation Some of these open questions at the functional level might find their mechanisms on their structural correlates A key question is

the link between structure and function and the use of structural priors for the understanding of the functional connectivity measures As effective connectivity is concerned recently a common framework has been proposed for Transfer Entropy and Granger Causality a well established methodology originally based on autoregressive models This framework can open the way to new theories and applications This Research Topic brings together contributions from researchers from different backgrounds which are either developing new approaches or applying existing methodologies to new data and we hope it will set the basis for discussing the development and validation of new Information based methodologies for the understanding of brain structure function and dynamics
