### The ITIL guiding principles

Guiding principle	Description
Focus on value	Everything that the organization does needs to create, deliver or enhance value to the organization. The focus of value principle encompasses every perspective, including the experience of customers and users. Do not just focus on your specific activities, but also consider what a process enables in the long term. There is a risk to be a good that is the current service process, program, project, and people that can be used to create the desired outcome.
Start where you are	The current state should be investigated and assessed, taking into account the fully understood context. Do not attempt to do something at once. Start high, then gradually reduce complexity as you go, by organizing work into smaller, manageable activities that can be completed in a timely manner. Do not be concerned a change focus or work effort.
Progress iteratively with feedback	Work in feedback cycles. Throughout and after each iteration, all should be checked and assessed, and appropriate, incremental change. Working together on cross-functional problems results in faster problem fixing, more resources to operations, and increased treatment of long-term issues.
Collaborate and promote visibility	Enhancing knowledge, expertise, information, understanding, and trust. Work and communication should be visible, open, and

### Achieving value: costs

### Cost risks

Achieving desired outcomes requires resources (and therefore costs) and other associated with costs. Service providers help their customers to address outcomes and to design or take on some of the associated risks and costs. On the other hand, service relationships can introduce new risks and costs, and in some cases, can negatively affect some of the intended outcomes after supporting others.

### Value

Value streams and processes	Value streams and processes represent a sequence of activities, including operations, design, problem, service, and operations, which should be coordinated to provide a desired value. If a process, service, system or activity fail to provide value to produce a useful outcome, eliminate it in a process or procedure. Use the minimum number of steps necessary to accomplish the requirements. Always use customer-focused thinking to produce practical solutions that deliver results.
Organizational structure	Structure of all types, particularly info, structure enables the most effective knowledge working, that is fully accepted and use knowledge to address whatever is a capable of human, interaction should only happen when it's beneficial to value.

**Guerrilla Capacity Planning** Neil J. Gunther,2007-01-17 In these days of shortened fiscal horizons and contracted time to market schedules traditional approaches to capacity planning are often seen by management as tending to inflate their production schedules Rather than giving up in the face of this kind of relentless pressure to get things done faster Guerrilla Capacity Planning facilitates rapid forecasting of capacity requirements based on the opportunistic use of whatever performance data and tools are available in such a way that management insight is expanded but their schedules are not A key Guerrilla concept is tactical planning whereby short range planning questions and projects are brought up in team meetings such that management is compelled to know the answer and therefore buys into capacity planning without recognizing it as such Once you have your foot in the door capacity planning methods can be refined in an iterative cycle of improvement called The Wheel of Capacity Planning

Another unique Guerrilla tool is Virtual Load Testing based on Dr Gunther's Universal Law of Computational Scaling which provides a highly cost effective method for assessing application scalability *ITIL for Beginners* David Larson,2016-10-08
