Bradley Bassler, 2012 Wittgenstein said that philosophers should greet each other not by saying Hello but rather Take your time But what is time Time is money but this points to an even better answer to this basic question for our modern epoch time is acceleration In a cultural system which stresses economic efficiency the quicker route is always the more prized if not always the better one Wittgenstein's dictum thus constitutes an act of rebellion against the dominant vector of our culture but as such it threatens to become quickly anti modern We need an approach to reading our information rich culture which is not reactionary but rather meets its accelerated condition In this book O Bradley Bassler develops a toolkit for acute reading of our modern pace not through withdrawal but rather through active engagement with a broad range of disciplines The main characters in this drama comprise a cast of master readers Hannah Arendt Jean Starobinski Harold Bloom Angus Fletcher Hans Blumenberg and John Ashbery with secondary figures drawn from the readers and critics whom this central group suggests We must develop a vocabulary of pacing reflecting our modern distance from classical

sources and the concomitant acceleration of our contemporary condition Only in this way can we begin to situate the phenomenon of modernity within the larger scales of human culture and history

Pragmatism and Modern Architecture William G. Ramroth,2006-03-29 Architecture is not origami A drawing cannot be folded in a clever way to make a real building A picture of a building is no more architecture than a drawing of a sculpture is the sculpture To exist the building must be built A building is the outcome of an idea Pragmatism is the philosophy that connects an idea with its result It measures the success of the idea by its its function its appearance and its contribution to the environment in which it exists This work examines the relationship between the methods of modern architecture and the philosophy of pragmatism It discusses how modern architecture and pragmatism developed during the nineteenth century and offers examples of pragmatism within the work and writings of predominant practitioners and theorists of modern architecture

New Media Anna Everett,John T. Caldwell,2003-02-28

The mushroom like growth of new media technologies is radically challenging traditional media outlets The proliferation of technologies like DVDs MP3s and the Internet has freed the public from what we used to understand as mass media In the face of such seismic shifts and ruptures the theoretical and pedagogical foundations of film and TV studies are being shaken to their core New Media demands a necessary rethinking of the field Writing from a range of disciplines and perspectives the scholars here outline new theses and conceptual frameworks capable of engaging the numerous facets of emergent digital technology

Compositional Intelligence Daniel Koehler,2025-09-12 With a foreword by Mario Carpo Given the extensive data sources represented by urban environments this book investigates the potential of architecting for cities using large scale models the technological underpinning of Generative AI Koehler examines Large Language Models LLMs in relation to architectural questions of typology those critical junctures where architecture engages with the city itself Typology becomes the interface between an AI model and its modeled audiences represented languages and scales of operation The investigation reveals how LLMs represent a fundamental shift from comprehending discrete elements to understanding entire languages introducing a stochastic perspective that transforms how we read and shape urban reality At the heart of this framework lies the concept of inductive types threshold interfaces that superpose multiple value regimes and actively reconfigure themselves in response to changing urban conditions By treating architecture as a form of representational materialism rather than a fixed language designers can engage with complex urban systems while maintaining critical agency This approach envisions architecture as an embedding of languages where buildings become processors of information that compute through their spatial arrangements The synthetic knowledge produced by LLMs enables access to plural values and stakeholder perspectives allowing architects to participate in broader material ecologies through computational superposition rather than traditional

dialectical methods Providing a robust theoretical framework as well as practical insights into how architects can adapt their notational tools and design processes to embrace AI this will be an essential read for any practicing or researching architect or urban designer interested in the implications of AI on the built environment *Sir John Vanbrugh* Vaughan Hart,2008 In explaining why Vanbrugh s buildings look the way they do Hart allows his novel architectural forms to be understood for the first time as expressions of the visual and psychological theories of his friend and fellow Whig Joseph Addison BOOK JACKET
