Computational Methods For Option Pricing Frontiers In Applied Mathematics:

Computational Methods for Option Pricing Yves Achdou, Olivier Pironneau, 2005-01-01 The authors review some important aspects of finance modeling involving partial differential equations and focus on numerical algorithms for the fast and accurate pricing of financial derivatives and for the calibration of parameters This book explores the best numerical algorithms and discusses them in depth from their mathematical analysis up to their implementation in C with efficient numerical libraries

Handbooks in Operations Research and Management Science: Financial Engineering John R. Birge, Vadim Linetsky, 2007-11-16 The remarkable growth of financial markets over the past decades has been accompanied by an equally remarkable explosion in financial engineering the interdisciplinary field focusing on applications of mathematical and statistical modeling and computational technology to problems in the financial services industry The goals of financial engineering research are to develop empirically realistic stochastic models describing dynamics of financial risk variables such as asset prices foreign exchange rates and interest rates and to develop analytical computational and statistical methods and tools to implement the models and employ them to design and evaluate financial products and processes to manage risk and to meet financial goals This handbook describes the latest developments in this rapidly evolving field in the areas of modeling and pricing financial derivatives building models of interest rates and credit risk pricing and hedging in incomplete markets risk management and portfolio optimization Leading researchers in each of these areas provide their perspective on the state of the art in terms of analysis computation and practical relevance The authors describe essential results to date fundamental methods and tools as well as new views of the existing literature opportunities and challenges for future research

Mathematical Modelling and Numerical Methods in Finance Alain Bensoussan, Qiang Zhang, 2009-06-16 Mathematical finance is a prolific scientific domain in which there exists a particular characteristic of developing both advanced theories and practical techniques simultaneously Mathematical Modelling and Numerical Methods in Finance addresses the three most important aspects in the field mathematical models computational methods and applications and provides a solid overview of major new ideas and results in the three domains Coverage of all aspects of quantitative finance including models computational methods and applications Provides an overview of new ideas and results Contributors are leaders of the field

Mathematical and Computational Techniques for Multilevel Adaptive Methods Ulrich Ruede, 1993-01-01 This monograph presents a unified approach to adaptive methods addressing their mathematical theory efficient algorithms and flexible data structures

American-Type Options Dmitrii S. Silvestrov, 2013-11-27 The book gives a systematic presentation of stochastic approximation methods for models of American type options with general pay off functions for discrete time Markov price processes Advanced methods combining backward recurrence algorithms for computing of option rewards and general results on convergence of stochastic space skeleton and tree approximations for option rewards are applied to a variety of models of multivariate modulated Markov

price processes The principal novelty of presented results is based on consideration of multivariate modulated Markov price processes and general pay off functions which can depend not only on price but also an additional stochastic modulating index component and use of minimal conditions of smoothness for transition probabilities and pay off functions compactness conditions for log price processes and rate of growth conditions for pay off functions The book also contains an extended bibliography of works in the area This book is the first volume of the comprehensive two volumes monograph The second volume will present results on structural studies of optimal stopping domains Monte Carlo based approximation reward algorithms and convergence of American type options for autoregressive and continuous time models as well as results of the corresponding experimental studies

Computational Frameworks for the Fast Fourier Transform Charles Van Loan,1992-01-01 The most comprehensive treatment of FFTs to date Van Loan captures the interplay between mathematics and the design of effective numerical algorithms a critical connection as more advanced machines become available A stylized Matlab notation which is familiar to those engaged in high performance computing is used The Fast Fourier Transform FFT family of algorithms has revolutionized many areas of scientific computation The FFT is one of the most widely used algorithms in science and engineering with applications in almost every discipline This volume is essential for professionals interested in linear algebra as well as those working with numerical methods The FFT is also a great vehicle for teaching key aspects of scientific computing
