Currents And Mesons:

Currents and Mesons J. J. Sakurai, 1969-01-15 Current and Mesons is the most recent publication in the Chicago Lectures in Physics series The book presents Professor Sakurai's introduction to a new field of elementary particle physics which has become increasingly important in the past few years It is based on a course given to his advanced graduate students in theoretical high energy physics at the University of Chicago The author begins with a brief review of SU 3 The major topics then treated are the divergence condition and current commutation relations vector meson universality PCAC and the Goldberger Treiman relation soft pion processes and asymptotic symmetries and spectral function sum rules The book concludes with a discussion of notation and of normalization convention Professor Sakurai's work deals with topics on which much of current discussion on the theory of elementary particles is focused The material is designed for the advanced student who is seriously interested in doing original work and as such provides a much needed introduction to the present literature in the field

Nuclear Structure Giovanni C. Bonsignori, 2001 Nuclear structure physics is undergoing a major revival full of activities and excitement On the experimental side this is being made possible by advances in detector technology and accelerator capabilities that give access to data and nuclei especially exotic nuclei far from stability never before accessible On the theoretical side new concepts ideas and computational techniques are advancing our understanding of effective interactions nucleonic correlations and symmetries of structure This volume covers a broad range of topics on nuclear structure including collective excitations proton neutron excitation modes phase transitions signatures of structure isospin structure at both high and low angular momenta recent developments in nuclear theory the vast new realm of exotic nuclei far from the valley of stability and the latest technological advances of detectors and facilities which will lead this branch of physics into the future

Nuclear Structure, Procs Of The Conf "Bologna 2000: Structure Of The Nucleus At The Dawn Of The Century" (Vol 2) Giovanni C Bonsignori, Mauro Bruno, Alberto Ventura, Dario Vretenar, 2001-11-09 The Conference Bologna 2000 Structure of the Nucleus at the Dawn of the Century was devoted to a discipline which has seen a strong revival of research activities in the last decade New experimental results and theoretical developments in nuclear physics will certainly make important contributions to our knowledge and understanding of Nature's fundamental building blocks The interest aroused by the Conference among the scientific community was clearly reflected in the large number of participants These represented the most important nuclear physics laboratories in the world The Conference covered five major topics of modern nuclear physics nuclear structure nucleus nucleus collisions hadron dynamics nuclear astrophysics and transdisciplinary and peaceful applications of nuclear science It reviewed recent progress in the field and provided a forum for the discussion of current and future research projects
