

Solved Examples on Heat Transfer:-

Question 1:-

An idealized representation of the air temperature as a function of distance from a single-pane window on a calm, winter day is shown in below figure. The window dimensions are 60 cm × 60 cm × 0.50 cm. (a) At what rate does heat flow out through the window? (Hint: The temperature drop across the glass is very small.) (b) Estimate the difference in temperature between the inner and outer glass surfaces.

Concept:-

The rate H at which heat is transferred through the slab is,

- (a) directly proportional to the area (A) available.
- (b) inversely proportional to the thickness of the slab Δx .
- (c) directly proportional to the temperature difference ΔT .

$$\text{So, } H = kA \Delta T / \Delta x$$

Here, k is the proportionality constant and is called thermal conductivity of the material.

From the equation $H = kA \Delta T / \Delta x$, the temperature difference ΔT will be,

$$\Delta T = H \Delta x / kA$$

The temperature gradient is defined as,

$$\text{Temperature gradient} = \Delta T / \Delta x$$

Solution:-

(a) To find out the rate of heat flows out through the window, first we have to find out the temperature gradient both inside and outside the window.

Mathematical Modelling Courses for Engineering Education

Yasar Ersoy, Alfredo O. Moscardini, 2013-06-29 As the role of the modern engineer is markedly different from that of even a decade ago the theme of engineering mathematics education EME is an important one The need for mathematical modelling MM courses and consideration of the educational impact of computer based technology environments merit special attention This book contains the proceeding of the NATO Advanced Research Workshop held on this theme in July 1993 We have left the industrial age behind and have entered the information age Computers and other emerging technologies are penetrating society in depth and gaining a strong influence in determining how in future society will be organised while the rapid change of information requires a more qualified work force This work force is vital to high technology and economic competitiveness in many industrialised countries throughout the world Within this framework the quality of EME has become an issue It is expected that the content of mathematics courses taught in schools of engineering today have to be re evaluated continuously with regard to computer based technology and the needs of modern information society The main aim of the workshop was to provide a forum for discussion between mathematicians engineering scientists mathematics educationalists and courseware developers in the higher education sector and to focus on the issues and problems of the design of more relevant and appropriate MM courses for engineering education
