Econometric methods have been applied in asset pricing, corporate finance, international finance, options and futures, risk management, and in stress testing for financial institutions. This handbook discusses a variety of econometric methods including single equation, multiple regression, simultaneous equation, regression, and panel data analysis, among others. It also covers statistical distributions such as the binomial and log normal distributions in light of their applications to portfolio theory and asset management, in addition to their use in research regarding options and futures contracts. In both theory and methodology, we need to rely upon mathematics, which includes linear algebra, geometry, differential equations, Stochastic differential equation, Ito calculus, optimization, constrained optimization, and others. These forms of mathematics have been used to derive the capital market line, security market line, capital asset pricing model, option pricing model, portfolio analysis, and others. In recent times, an increased importance has been given to computer technology in financial research. Different computer languages and programming techniques are important tools for empirical research in finance. Hence, simulation, machine learning, big data, and financial payments are explored in this handbook. Led by Distinguished Professor Cheng Few Lee from Rutgers University, this multi-volume work integrates theoretical, methodological, and practical issues based on his years of academic and industry experience.
