PROBABILITY AND STATISTICS WITH RELIABILITY, QUEUING, AND COMPUTER SCIENCE APPLICATIONS KISHOR SHRIDHARBHAI TRIVEDI, 1988-01-01 This book provides an introduction to probability stochastic processes and statistics for students of computer science electrical computer engineering reliability engineering and applied mathematics It prepares the student for solving practical stochastic modelling problems and for the more advanced courses on queuing or reliability theory The text emphasizes on applications illustrating each theoretical concept by solved examples relating to algorithm analysis or communication related problems The prerequisites are a knowledge of calculus a course on introduction to computer programming and an understanding of computer organization The book is also suitable for self study by computer professionals and mathematicians interested in applications *Computer Systems Performance Evaluation and Prediction*

Paul Fortier, Howard Michel, 2003-07-09 *Computer Systems Performance Evaluation and Prediction* bridges the gap from academic to professional analysis of computer performance. This book makes analytic simulation and instrumentation based modeling and performance evaluation of computer systems components understandable to a wide audience of computer systems designers, developers, administrators, managers, and users. The book assumes familiarity with computer systems architecture, computer systems software, computer networks, and mathematics including calculus and linear algebra. It fills the void between engineering practice and the academic domain's treatment of computer systems performance evaluation and assessment. Provides a single source where the professional or student can learn how to perform computer systems engineering tradeoff analysis. Allows managers to realize cost effective yet optimal computer systems tuned to a specific application.

Statistical Methods for Engineering and Sciences H. C. Taneja, 2013-12-30 The present book is meant for the first year students of various universities. Engineering educationists feel that first year students of all disciplines must have an elementary and general idea about various branches of electronics. Spread in sixteen chapters, the book broadly discusses

Introduction to Stochastic Models Roe Goodman, 2006-01-01 Newly revised by the author, this undergraduate level text introduces the mathematical theory of probability and stochastic processes. Using both computer simulations and mathematical models of random events, it comprises numerous applications to the physical and biological sciences, engineering, and computer science. Subjects include sample spaces, probabilities, distributions, and expectations of random variables, conditional expectations, Markov chains, and the Poisson process. Additional topics encompass continuous time stochastic processes, birth and death processes, steady state probabilities, general queuing systems, and renewal processes. Each section features worked examples, and exercises appear at the end of each chapter with numerical solutions at the back of the book. Suggestions for further reading in stochastic processes, simulation, and various applications also appear at the end.

Modeling and Analysis of Local Area Networks Paul J. Fortier, 2018-05-04 *Modeling and Analysis of Local Area Networks* fills a void in the array of books on Local Area Networks (LANs) in that it reviews the state of LAN technology from a hardware and software perspective, develops a set of metrics that can be used to evaluate LANs for end applications, and investigates methodologies for evaluating LANs from these perspectives. The book discusses LAN evaluation techniques utilizing analysis, operational analysis, hardware testbeds, and simulations. Simulations will be stressed in greater detail, and a tool available for evaluating LANs performance called MALAN is presented, and the details of its structure developed.

Computational Intelligence and Security Yunping Wang, 2007-08-21 This book constitutes the thoroughly refereed post-proceedings of the annual International Conference on Computational Intelligence and Security (CIS 2006) held in Guangzhou, China, in November 2006. The 116 revised papers presented were carefully reviewed and selected from a total of 2078 initial submissions during two rounds of revision and improvement. The papers are organized in topical sections on bio-inspired computing, evolutionary computation, learning systems, and multi-agents, cryptography, information processing, and
