Algorithmic Puzzles is a book that offers solutions to complex data structures and algorithms. There are multiple solutions for each problem and the book is coded in C. It comes handy as an interview and exam guide for computer scientists. A handy guide of sorts for any computer science professional.

Data Structures And Algorithms Made Easy by Narasimha Karumanchi was published in March and it is coded in C language. This book serves as a guide to prepare for interviews, exams, and campus work. It is also available in Java. In short, this book offers solutions to various complex data structures and algorithmic problems. What is unique is that our main objective isn't to propose theorems and proofs about DS and Algorithms. We took the direct route and solved problems of varying complexities. That is, each problem corresponds to multiple solutions with different complexities. In other words, we enumerated possible solutions. With this approach, even when a new question arises, we offer a choice of different solution strategies based on your priorities.

Data Structures and the Java Collections

Framework William Joseph Collins,2002 This student friendly book is designed for a course in data structures where the implementation language is Java The focus is on teaching students how to apply the concepts presented therefore many applications and examples are included as well as programming projects which get students thinking more deeply The author shows students how to use the data structures provided in the Java Collections Framework as well as teaching them how to build the code themselves Using the Java Collections Framework gives the students the opportunity to work with fully tested code Also since this is a standard library of classes students will be able to continue to use it for other courses and as they move into industry Another feature of this text is that labs are provided with the book They can be used as open labs closed labs or homework assignments and are designed to give students hands on experiences in programming These optional labs provide excellent practice and additional material

Classic Data Structures in Java Timothy Budd,2001

With this book Tim Budd looks at data structures by providing a solid foundation on the ADT and uses the graphical elements found in Java when possible The beginning chapters provide the foundation on which everything else will be built These chapters define the essential concept of the abstract data type ADT and describe the tools used in the evaluation and analysis of data structures The book moves on to provide a detailed description of the two most important fundamental data abstractions the vector and the linked list providing an explanation of some of the more common variations on these fundamental ideas Next the material considers data structures applicable to problems in which the order that values are added to a collection is important followed by a consideration of the various different ways in which binary trees are used in the creation of data structures The last few chapters consider a sequence of more advanced data structures Most are constructed as adaptors built on top of earlier abstractions Hash tables are introduced first as a technique for implementing simple collections and later as a tool for developing efficient maps Lastly the graph data type is considered Here there are several alternative data structures presentations in common use and the emphasis in this chapter is more on the development and analysis of useful

algorithms than on any particular data structure

Data Structures & Other Objects Using Java Michael Main,2003 This book takes a gentle approach to the data structures course in Java It offers an early self contained review of object oriented programming and Java to give students a firm grasp of key concepts and allows those experienced in other languages to adjust easily The book also offers a flexibility which allows professors such options as emphasizing object oriented programming covering recursion and sorting early or accelerating the pace of the course This title meets the needs of professors searching for a book to balance the introduction of object oriented programming and data structures with Java The new edition has been updated to cover Java 1 3 and includes new appendices with more reference material on such topics as Java collections It also features increased coverage of object oriented programming and inheritance New exercises on radix sort and shell sort have also been added

Data Structures in Java Thomas A. Standish,1998 Using Java TM 1 1 Professor Thomas A Standish teaches the fundamentals of data structures and algorithms With this exciting new language Standish takes a fresh look at the subject matter New challenges arise any time a new language is used and the author meets these challenges For example although Java is a language without explicit pointers this book offers pointer diagrams to help students visualize reason about and understand this major Data Structures topic Standish s clear presentation helps readers tie the many concepts of data structures together with recurring themes Central ideas such as modularity levels of abstraction efficiency and tradeoffs serve as integrators in the book in order to tie the material together conceptually and to reveal its underlying unity and interrelationships Highlights Reviews the

fundamentals of object oriented programming and Java in Chapter 2 and Appendix A allowing students with no prior knowledge of Java to get up and running quickly Creates a Java applet with a simple GUI in Chapter 2 Covers recursion early and carefully in Chapter 4 to help students grasp this challenging concept Includes an introduction to modularity and data abstraction concepts in Chapter 5 and coverage of key software engineering concepts and skills in Appendix C Contains common pitfall sections at the end of each chapter to help students recognize and avoid potential dangers Instructor s materials are available from your sales rep If you do not know your local sales representative please call 1 800 552 2499 for assistance or use the Addison Wesley Longman rep locator at <http://hepg.awl.com/replocator> 020130564XB04062001
