**Micro-Assembly Technologies and Applications** Sandra Koelemeijer, Svetan Ratchev, 2008-03-12 Micro assembly is a key enabling technology for cost effective manufacture of new generations of complex micro products It is also a critical technology for retaining industrial capabilities in high labour cost areas such as Europe since up to 80% of the production cost in some industries is attributed directly to assembly processes With the continuous trend for product miniaturisation the scientific and technological developments in

micro assembly are expected to have a significant long term economic demographic and social impact A distinctive feature of the process is that surface forces are often dominant over gravity forces which determines a number of specific technical challenges Critical areas which are currently being addressed include development of assembly systems with high positional accuracy micro gripping methods that take into account the adhesive surface forces high precision micro feeding techniques and micro joining processes Micro assembly has developed rapidly over the last few years and all the predictions are that it will remain a critical technology for high value products in a number of key sectors such as healthcare communications defence and aerospace The key challenge is to match the significant technological developments with a new generation of micro products that will establish firmly micro assembly as a core manufacturing process
